

# Business Requirement Document

**Project Title:** Accomplish Health – Appointment Booking & Admin Platform

**Date:** 10/05/2024

## 1. Introduction

The purpose of this document is to outline the business requirements for the Accomplish Health Appointment Booking and Administrative Platform, designed to enhance the scheduling, onboarding, and operational management processes for healthcare providers and patients.

This solution aims to streamline patient appointment booking, insurance verification, payment collection, and intake data management, while providing healthcare administrators with powerful tools to manage appointments, staff schedules, communications, and analytics through a single, integrated system.

## 2. Project Overview

The Accomplish Health Platform serves as a unified digital ecosystem for both patients and administrative staff.

- On the patient side, it offers an intuitive, step-by-step appointment booking process with demographic, insurance, and payment capture, followed by digital intake forms.
- On the admin side, it provides a robust dashboard for managing patients, schedules, and operations within a HIPAA-compliant, secure environment.

The system is built on Caspio (low-code platform), allowing flexible customization with embedded JavaScript for styling and dynamic workflows. Integrations with third-party services (Orbit for insurance verification, Stripe for payments) ensure automation and compliance.

## 3. Objectives and Scope

### Objectives

- Simplify patient onboarding and appointment scheduling.
- Integrate insurance verification and self-pay options.
- Enable secure payment handling through third-party processors.
- Provide administrators with real-time visibility into appointments, schedules, and patient communications.
- Ensure brand consistency with flexibility for digital adaptation (font, color, and accessibility standards).
- Improve clinical intake efficiency through digital forms and automated reminders.

## **Scope**

### **In Scope**

#### **Patient Booking Portal**

- Stepwise booking form for new and returning patients.
- Fields for demographics, insurance, and payment.
- Appointment selection with emphasis on *first available slots*.
- Dynamic consent form consolidation.
- Post-booking confirmation + email with onboarding form link.
- Clinical intake form with multi-section medical questionnaire.
- Integration with Orbit (insurance) and Stripe (payment).

#### **Admin Dashboard**

- Secure login for administrative and clinical staff.
- Dashboard view for appointments, open slots, and KPIs.

- Patient management with search, filter, and communication history.
- Calendar management (single/all provider views).
- Staff time-off management and approvals.
- Messaging system for provider–patient chat.
- Financials, schedules, analytics, and testimonials management.

#### Out of Scope (for MVP)

- Video consultation integration.
- Automated clinical diagnosis or prescription.
- Deep EHR synchronization (placeholder available).
- Multi-location complex billing (future phase).

## 4. Stakeholders

| Role                     | Name / Responsibility            |
|--------------------------|----------------------------------|
| <b>Project Sponsor</b>   | Accomplish Health Executive Team |
| <b>Product Manager</b>   | Dan (Client Representative)      |
| <b>Business Analyst</b>  | [Your Name]                      |
| <b>Design Lead</b>       | [UI/UX Designer Name]            |
| <b>Development Team</b>  | Caspio Low-Code Development Team |
| <b>Quality Assurance</b> | Internal QA + Client UAT Team    |
| <b>End Users</b>         | Patients, Providers, Admin Staff |

# 5. Functional Requirements

## Patient Platform

### 1. User Registration & Login

- Secure login and account creation for patients.
- Email verification and password reset functionality.
- “Try Without Account” option for first-time appointments.

### 2. Appointment Booking Flow

- Step 1: Basic & Demographic Details (Name, Address, Gender, DOB, Referring Physician).
- Step 2: Appointment Selection (First Available or Specific Provider).
- Step 3: Insurance Entry (Verification via Orbit).
- Step 4: Credit Card Entry (Stripe integration with cancellation policy link).
- Step 5: Consent Form (single checkbox confirmation).
- Step 6: Confirmation (popup + email notification).

### 3. Clinical Intake Form

- Digital intake form with editable sections:
  - Medical, Family, Surgical, and GYN History.
  - Allergies, Medications, Functional and Social History.
  - Nutrition and Weight History.
- Option to skip and complete later (email reminder sent automatically).
- Validation for mandatory fields and conditional logic (e.g., “If Yes → add details”).

### 4. Notifications & Emails

- Appointment confirmation with date, provider, and clinic link.
- Reminder for incomplete intake forms.
- Insurance or payment failure notifications.

## **5. Branding & UI Requirements**

- Two testimonials shown on the left (with optional photos).
- Calendar view directly above time slots.
- Friendly fallback message for unsupported states.
- Responsive design across desktop and mobile.
- Font and color flexibility per digital accessibility guidelines.

## **Admin Dashboard**

### **1. Login Module**

- Secure login (email, password, remember me).
- Role-based access (Admin, Clinician, Staff).
- Forgot Password / Reset function.

### **2. Dashboard Overview**

- Appointment Summary: Completed, Cancelled, No-Show.
- Available Slots + Wait-Time metrics.
- Quick access to appointments, messages, and to-dos.

### **3. Patients Module**

- View all patients with filters (date, provider, appointment type).

- Add/Edit/Delete patient profiles.
- View communication logs, intake forms, and history.
- Reassign patient or provider, add internal notes.

#### **4. Appointments Module**

- View all upcoming and past appointments.
- Filter by provider, type, and status.
- Reschedule or cancel appointments.
- Real-time updates synced from booking platform.

#### **5. Calendar View**

- Toggle between *Single Provider* and *All Providers* views.
- Color-coded indicators (Frozen, Booked, Success, No Show, Time Off).
- Time zone and view type filters (Daily, Weekly).

#### **6. Messaging & Communication**

- Secure chat between provider and patient.
- Message search, filters, and status indicators.
- Integration with patient detail view.

#### **7. Time-Off Requests**

- Submit and approve time-off requests.
- View status (Pending/Approved).
- Filter by requester, approver, or date range.

#### **8. Ops Module**

- Financial Reports (billing summaries, revenue snapshots).
- Schedules management for provider availability.
- Analytics dashboard for KPIs.
- Professional Staff directory and management.
- Testimonials editor (for front-end site).

## 6. Non-Functional Requirements

| Category            | Requirement                                                           |
|---------------------|-----------------------------------------------------------------------|
| <b>Security</b>     | HIPAA compliance, encrypted data storage (SSL/TLS), secure API calls. |
| <b>Performance</b>  | <2 sec load time for booking form; scalable to 10,000+ records.       |
| <b>Usability</b>    | Simple, step-based booking UI; accessible (WCAG 2.1 compliance).      |
| <b>Scalability</b>  | Built on Caspio; expandable for new modules (billing, EHR).           |
| <b>Data Privacy</b> | PHI masked where needed; role-based access enforced.                  |
| <b>Integration</b>  | Orbit (insurance verification) and Stripe (payment gateway).          |

## 7. Assumptions

- Orbit and Stripe integrations will provide stable APIs.
- Admin and patient data will be stored within Caspio's HIPAA-compliant environment.
- Branding guidelines can be modified for web accessibility.
- Internet connection required for all modules.
- The system supports both desktop and mobile browsers.

## 8. Constraints

- Development limited by Caspio's platform capabilities.
- Third-party API downtime (Orbit/Stripe) may affect flow temporarily.
- Visual styling flexibility dependent on JavaScript overrides.

## 9. Dependencies

- Orbit API (insurance verification).
- Stripe (payment gateway).
- Caspio hosting and database infrastructure.
- Client-provided assets (branding, fonts, and testimonials).

## 10. Glossary

| Term          | Definition                                                                                 |
|---------------|--------------------------------------------------------------------------------------------|
| <b>PHI</b>    | Protected Health Information.                                                              |
| <b>HIPAA</b>  | Health Insurance Portability and Accountability Act – U.S. compliance for healthcare data. |
| <b>Caspio</b> | Low-code platform used to build and deploy the system.                                     |
| <b>Orbit</b>  | Third-party service for insurance validation.                                              |
| <b>Stripe</b> | Payment gateway for secure card processing.                                                |

## 11. Roles and Functionality

| Role | Key Functions |
|------|---------------|
|------|---------------|

|                   |                                                                 |
|-------------------|-----------------------------------------------------------------|
| <b>Patients</b>   | Schedule appointments, complete forms, make payments.           |
| <b>Clinicians</b> | View and manage patient appointments, chat, and intake data.    |
| <b>Admins</b>     | Oversee appointments, schedules, staff, and system settings.    |
| <b>Ops Staff</b>  | Manage financials, analytics, testimonials, and configurations. |

## 12. API Integration and Payment Gateway Confirmation

- **Orbit Integration:** For insurance verification and eligibility checks during booking.
- **Stripe Integration:** For secure credit card payments and self-pay transactions.
- **Optional Future API:** EHR/Clinical data exchange (Canvas or other).

Client confirmation is required for:

- Final Stripe account configuration (live vs sandbox).
- Orbit API credentials and data exchange format.
