

Functional Requirements Document (FRD)

Admin Platform – Dashboard, Patient & Operations Management

1. Introduction

This module covers all backend administrative functionalities of the Accomplish Health system, designed for internal use by administrators, clinicians, and operations staff.

It enables users to manage patients, appointments, schedules, messages, time-off requests, and analytics through a centralized portal. The system is built on Caspio, ensuring HIPAA compliance, secure data handling, and role-based access control.

Key features include:

- Secure login and user authentication with roles.
- Centralized dashboard displaying real-time KPIs.
- Comprehensive patient records and management.
- Appointment and calendar management for multiple providers.
- Messaging and communication tracking between patients and providers.
- Staff time-off request handling and approvals.
- Operational modules for analytics, testimonials, and financial oversight.

2. Functional Requirements

FRD 1: Admin Login & Role-Based Access

ID	Description	Backend Notes
----	-------------	---------------

1.1	The system shall provide a secure login screen for Admin, Clinician, and Operations users.	Authentication handled by Caspio authentication tables.
1.2	The user shall log in using email and password credentials.	Passwords encrypted with salted hashing.
1.3	The system shall display an error message if credentials are invalid.	Frontend validation + DB check.
1.4	The system shall support “Remember Me” functionality for returning users.	Token-based session persistence.
1.5	The system shall support password reset via “Forgot Password” workflow.	Email OTP or reset link sent via SMTP.
1.6	User sessions shall automatically log out after 30 minutes of inactivity.	Session timeout logic.
1.7	The system shall implement role-based permissions.	Roles: Admin, Clinician, Ops; access defined via role mapping.
1.8	Login attempts shall be logged with timestamps and IP addresses.	Stored in “user_activity_log” table.

FRD 2: Dashboard Overview

ID	Description	Backend Notes
2.1	The system shall display a KPI summary on login showing total appointments, completed, cancelled, and no-show counts.	Appointment table aggregate query.
2.2	The system shall show average wait time per provider.	Calculated from appointment start vs actual start timestamps.
2.3	The system shall display “First Available Slot” indicators.	Pulled from Provider Availability Table.
2.4	The dashboard shall include a “My Messages” section with recent unread messages.	Latest messages from messaging table (limit 5).
2.5	The system shall visualize daily/weekly appointment trends via bar or line chart.	Caspio chart widget linked to analytics table.

2.6	Clicking a KPI metric shall redirect to its detailed view (e.g., Appointment module filtered by status).	URL parameterized linking.
2.7	Dashboard data shall auto-refresh every 10 minutes.	Client-side polling script.

FRD 3: Patient Management Module

ID	Description	Backend Notes
3.1	The system shall provide a list view of all patients with pagination.	DataPage grid view with 25 items per page.
3.2	The system shall allow searching and filtering by name, provider, appointment type, or date range.	Indexed fields for search efficiency.
3.3	The system shall allow Admins to manually add new patient records.	“Add Patient” form integrated with Caspio patient table.
3.4	The system shall allow editing existing patient details.	“Edit Patient” modal; audit trail maintained.
3.5	The system shall allow deletion of inactive patients with a confirmation popup.	Soft delete (flagged as inactive).
3.6	Clicking on a patient name shall open a detailed view showing demographics, insurance, history, and communication logs.	Patient Details Page with relational data joins.
3.7	Clinicians shall be able to add “Clinical Notes” linked to the patient record.	Stored in notes table with timestamps.
3.8	Admins shall be able to reassign patients to different providers.	Provider_ID update in patient table.
3.9	A “Refill Request” button shall enable quick creation of medication refill requests.	Linked to prescriptions table.
3.10	The system shall log every change to patient data for audit tracking.	Change log stored with before/after values.

FRD 4: Appointment Management Module

ID	Description	Backend Notes
4.1	The system shall display a table of all appointments with columns for patient, provider, date/time, and status.	Appointments table view.
4.2	The system shall allow filtering appointments by provider, date, or appointment type.	Filter parameters via query builder.
4.3	The system shall allow Admins to reschedule appointments.	Update appointment time; notify patient via email.
4.4	The system shall allow changing appointment status to "Completed," "Cancelled," or "No-Show."	Status updated with audit record.
4.5	The system shall auto-update appointment status once appointment time passes (if not marked).	Scheduled backend job.
4.6	The system shall allow exporting appointment data to CSV.	Caspio export functionality.
4.7	Clicking on an appointment shall open its detailed view (patient info, payment token, notes).	Appointment details page.

FRD 5: Calendar View

ID	Description	Backend Notes
5.1	The system shall display a visual calendar view of all provider appointments.	Caspio calendar widget or JS plugin.
5.2	The user can toggle between "Single Provider" and "All Providers" views.	Filter by provider_id or show all.
5.3	Appointments shall be color-coded based on status (Booked, Completed, Cancelled, No-Show, Time Off).	Color mapping via CSS.
5.4	The calendar shall support daily, weekly, and monthly view options.	Frontend filter setting.
5.5	Clicking on a calendar entry shall open appointment details.	OnClick event triggers modal.
5.6	Calendar times shall auto-adjust to selected time zone.	Timezone offset logic.

5.7	Admins can drag and drop appointments to reschedule.	Update event triggers reschedule confirmation.
-----	--	--

FRD 6: Messaging & Communication Module

ID	Description	Backend Notes
6.1	The system shall allow two-way messaging between providers and patients.	Messages stored in communication table.
6.2	Messages shall include sender name, timestamp, and message text.	Auto-fill from user session.
6.3	The system shall support message search and filters by patient name or date.	Indexed search fields.
6.4	Unread messages shall be highlighted.	Flag: message_status = "unread."
6.5	Clinicians can attach quick notes to messages (e.g., follow-up, prescription reminders).	Linked notes table.
6.6	The system shall auto-refresh message view every 30 seconds for real-time updates.	JS-based polling.

FRD 7: Time Off Requests

ID	Description	Backend Notes
7.1	The system shall allow providers to submit time-off requests specifying start and end dates.	Request form linked to time_off table.
7.2	Admins shall review, approve, or reject requests.	Approval status field: Pending / Approved / Rejected.
7.3	Once approved, the system shall automatically block those time slots in the provider's schedule.	Scheduler update trigger.
7.4	Providers shall receive notification of approval or rejection via email.	Automated email trigger.
7.5	Time-off records shall be visible in the provider's calendar view (marked in gray).	Calendar overlay layer.

FRD 8: Operations Module (Analytics, Testimonials & Financials)

ID	Description	Backend Notes
8.1	The system shall allow Admins to view financial summaries (revenue, payments received).	Data aggregated from payments table.
8.2	Admins shall be able to export analytics reports by date range or provider.	CSV export enabled.
8.3	The system shall include a “Testimonials” manager allowing Admins to add, edit, or delete testimonials.	Testimonials stored in testimonial table.
8.4	Testimonials shall be synced to the website front-end.	API or embed via Caspio DataPage.
8.5	The system shall allow managing staff profiles under “Professional Staff” tab.	CRUD on staff table.
8.6	The system shall provide operational KPIs like patient growth, intake completion rate, and cancellation ratio.	Generated dynamically via analytics queries.

3. User Journeys

Journey A: Admin Login and Dashboard Access

1. Admin navigates to the login screen.
2. Enters credentials and logs in.
3. The system authenticates and redirects to the Dashboard.
4. Dashboard displays key performance indicators and alerts.

Journey B: Patient Management

1. Admin clicks “Patients.”
2. Searches or filters patient records.

3. Views detailed patient profile.
4. Adds clinical notes or reassigns provider.
5. Updates insurance or contact details.

Journey C: Appointment Handling

1. Admin accesses “Appointments.”
2. Filters by provider or date range.
3. Edits or reschedules an appointment.
4. Confirms change → Patient auto-notified.

Journey D: Calendar & Time Off

1. Clinician opens Calendar view.
2. Submits time-off request.
3. Admin reviews and approves.
4. Blocked time automatically removed from availability.

Journey E: Messaging & Operations

1. Clinician checks unread messages.
2. Responds or adds notes to messages.
3. Admin reviews operational analytics and updates testimonials.

4. User Stories & Acceptance Criteria (GWT Format)

User Story 1 – Admin Login

As an admin,
I want to securely log in and access my dashboard,
so that I can manage appointments, patients, and analytics safely.

Acceptance Criteria:

- **Given** that I'm on the login screen,
When I enter valid credentials,
Then I should be redirected to the dashboard.
- **Given** invalid credentials,
When I attempt to log in,
Then I should see an "Invalid email or password" error.
- **Given** inactivity for 30 minutes,
When my session expires,
Then I should be logged out automatically.

User Story 2 – Patient Management

As an admin,
I want to manage patient data and communication history,
so that I can keep patient records updated and accessible to providers.

Acceptance Criteria:

- **Given** that I'm in the patient module,
When I search for a patient,
Then the system should return matching records instantly.
- **Given** that I view a patient profile,
When I click "Add Note,"
Then I should be able to save a timestamped clinical note.
- **Given** that I reassign a provider,
When I confirm the change,
Then the patient's provider ID should update and appear in the schedule.

User Story 3 – Appointment Management

As an admin,
I want to view, edit, and reschedule appointments,
so that I can ensure providers' schedules remain accurate.

Acceptance Criteria:

- **Given** that I'm in the Appointment module,
When I reschedule an appointment,
Then the system should send an updated confirmation email to the patient.
- **Given** that I change an appointment status,
When I mark it "Cancelled" or "Completed,"
Then it should update in real time on the dashboard and calendar.

User Story 4 – Messaging & Communication

As a clinician,
I want to send and receive messages securely with patients,
so that I can coordinate care and follow-up efficiently.

Acceptance Criteria:

- **Given** that I open the messaging window,
When I send a message,
Then the patient should receive it in their portal.
- **Given** unread messages,
When I open my inbox,
Then unread items should appear highlighted.
- **Given** that I add a quick note,
When I save it,
Then it should link to both the patient record and message thread.

User Story 5 – Time Off Requests

As a provider,
I want to submit and track my time-off requests,
so that my availability is properly updated in the scheduling system.

Acceptance Criteria:

- **Given** that I submit a time-off request,
When the admin approves it,
Then those time slots should automatically become unavailable in my calendar.
- **Given** a rejected request,
When the status changes,
Then I should receive an email notification with the reason.

User Story 6 – Operational Analytics

As an admin,

I want to view performance metrics and manage testimonials,
so that I can track performance and maintain brand consistency.

Acceptance Criteria:

- **Given** that I'm on the operations dashboard,
When I apply a date range filter,
Then all KPI metrics should refresh accordingly.
- **Given** that I edit a testimonial,
When I save it,
Then it should update instantly on the public site feed.
