

FleetFix - FRD Fixer

Module 3: Fixer App – Onboarding & Access Control

1. Introduction

This module covers the entry point and onboarding flow for Fixers. It ensures that service providers can create accounts securely, upload required documents, and begin the certification process.

Since Fixers represent the professional face of **Fixa**, onboarding must enforce **trust, compliance, and service eligibility** from day one.

Scope

- Splash / Welcome screen
- Signup (personal info, service selection, ID upload)
- KYC Verification Status
- Linkage to Certification Module for service eligibility (e.g., ASE for roadside)

2. Functional Requirements

FRD 3.1: Splash / Welcome Screen

ID	Description	Backend Notes
3.1.1	The system shall display a splash screen with the Fixa logo when the app launches.	Static asset, configurable branding
3.1.2	The system shall automatically route users to Dashboard if logged in and session token is	Token check via <code>/auth/session</code>

ID	Description	Backend Notes
	valid.	
3.1.3	The system shall route new users to Signup flow if no session token exists.	Redirect logic

FRD 3.2: Fixer Signup

ID	Description	Backend Notes
3.2.1	Allow Fixers to register using mobile number + OTP verification.	API: <code>/auth/signup</code> , OTP via Twilio
3.2.2	Allow optional email capture during signup.	DB: <code>fixer.email</code> (nullable)
3.2.3	Require government-issued ID upload (front + back).	API: <code>/kyc/upload-id</code>
3.2.4	Require service selection (Roadside, Delivery, Rental).	DB: <code>fixer.services_requested</code>
3.2.5	Require ASE certification if Roadside is selected.	Certification Module §4
3.2.6	Capture Fixer bank account details for payouts.	API: <code>/payouts/bank-link</code>
3.2.7	Require acceptance of Terms & Privacy Policy.	DB: <code>fixer.terms_accepted = true</code>
3.2.8	Set Fixer status to <code>PENDING_KYC</code> until verified.	DB: <code>fixer.status</code>

FRD 3.3: KYC Verification Status

ID	Description	Backend Notes
3.3.1	Display KYC status: Pending, Approved, Rejected.	API: <code>/kyc/status</code>
3.3.2	Show review message if status is Pending.	Auto-refresh via polling
3.3.3	Show rejection reason with re-upload option.	DB: <code>kyc_rejection_reason</code>
3.3.4	Grant Dashboard access when Approved.	Token refresh

ID	Description	Backend Notes
3.3.5	Restrict Roadside until ASE approved.	DB: <code>certified_services</code>

3. User Journeys

Journey A: New Fixer Registration

1. Fixer opens app and sees splash
2. Proceeds to Signup
3. Enters phone number → receives OTP → verifies
4. Uploads ID and selects services
5. Provides bank info and accepts terms
6. Status set to `Pending KYC`

Journey B: KYC Review Outcome

- **Approved** → Dashboard access
- **Rejected** → Reason shown → Re-upload documents
- **Roadside selected** → ASE certification required before jobs appear

4. User Stories & Acceptance Criteria

US-FIX-AUTH-01: Register as Fixer

As a Fixer, I want to register with my phone number and ID so that I can start working on Fixa.

Acceptance Criteria

- Given I enter valid mobile + OTP
- When I upload ID and select services
- Then my account is created with status `PENDING_KYC`

US-FIX-AUTH-02: KYC Status Tracking

As a Fixer, I want to track my KYC status so that I know if I'm approved.

Acceptance Criteria

- Given I completed signup
 - When I open KYC Status screen
 - Then I see Pending, Approved, or Rejected with reason
-

US-FIX-AUTH-03: Roadside Eligibility

As a Fixer, I want roadside jobs unlocked only after ASE upload.

Acceptance Criteria

- Given Roadside is selected
 - When ASE certification is uploaded
 - Then roadside jobs unlock after approval
-

5. Edge Cases

- Invalid OTP → "Invalid or expired OTP"
 - Duplicate mobile → "Already registered"
 - Incomplete ID upload → status remains Pending
 - Invalid bank info → blocks signup completion
 - Roadside without ASE → jobs blocked with message
 - Multiple KYC rejections → account flagged for Admin review
-

Module 3: Fixer App – Dashboard, Job Management & Completion

1. Introduction

This module defines how Fixers discover, accept, execute, and complete jobs. Certification status directly affects job visibility.

- **Certified Fixers:** Roadside + others
- **Community Fixers:** Delivery and Rental only

2. Functional Requirements

FRD 3.4: Fixer Dashboard (Job List)

ID	Description	Backend Notes
3.4.1	Show nearby jobs filtered by eligibility, region, status	GET <code>/fixer/jobs</code>
3.4.2	Display job cards with key info	Address hidden pre-accept
3.4.3	Toggle Online/Offline status	POST <code>/fixer/status</code>
3.4.4	Filter by category, sort by proximity/payout	Query params
3.4.5	Auto-refresh job feed	WebSocket + fallback
3.4.6	Lock jobs without certification	Deep link to Certification
3.4.7	Show region restriction banner	Region rules

FRD 3.5: Job Detail View

ID	Description	Backend Notes
3.5.1	Show full job details after tap	GET <code>/jobs/:id</code>
3.5.2	Mask customer details until accept	Privacy guard
3.5.3	Show SLA and penalties	Admin config
3.5.4	Display required eligibility badges	Certification check
3.5.5	Provide Accept / Reject actions	Accept locks job

FRD 3.6: Accept / Reject Job

ID	Description	Backend Notes
3.6.1	Accept reserves job and starts flow	POST <code>/jobs/:id/accept</code>
3.6.2	Reject returns job to pool	Cooldown optional
3.6.3	Prevent accept if not eligible	Server validation
3.6.4	Notify customer on accept	Event: JOB_ACCEPTED

FRD 3.7: Job Progress Flow

Statuses

- ON_THE_WAY
- ARRIVED
- STARTED
- COMPLETED
- CANCELLED (Fixer or Customer)

ID	Description	Backend Notes
3.7.1	Step-by-step status updates	POST <code>/jobs/:id/status</code>
3.7.2	Trigger customer notifications	Event-based
3.7.3	High-frequency location sharing on Start	WebSocket
3.7.4	Enforce proof before completion	Server validation
3.7.5	Prevent skipped transitions	Audit logs

FRD 3.8: Navigation

ID	Description	Backend Notes
3.8.1	Launch Maps with destination	Deep link
3.8.2	Show ETA overlay on return	Distance Matrix
3.8.3	Support multi-stop routes	Waypoints

FRD 3.9: Upload Proof & Completion

ID	Description	Backend Notes
3.9.1	Require photo proof	Signed S3 upload
3.9.2	Capture OTP or signature	<code>/jobs/:id/confirm</code>
3.9.3	Block completion without proofs	Validation
3.9.4	Trigger escrow release	JOB_COMPLETED
3.9.5	Show payout estimate	Wallet projection
3.9.6	Allow incident reporting	<code>/jobs/:id/incident</code>
