

Functional Requirements Document (FRD) – Admin Side for MGC FREIGHT

Project Name: MGC FREIGHT

Module: Admin

1. Introduction

This document outlines the functional requirements for the **Admin Module** of the MGC Freight platform. The Admin Module enables administrators to manage the platform, oversee user activity, and control system settings, including carrier integrations, user management, and reporting.

2. Functional Requirements

FRD 1: Login

ID	Description	Images/Notes
1.1	The system shall ensure that when the admin clicks on the admin link, they are navigated to the admin login screen.	
1.2	The system shall ensure that the admin will be able to see email and password fields along with a login button.	
1.3	The system shall ensure that only authenticated users can log in.	
1.4	The system shall ensure that if the admin forgets their password, they need to contact another admin via email to retrieve credentials.	

FRD 2: Dashboard

ID	Description	Images/Notes
2.1	The system shall ensure that once the admin is logged in, they will be able to view the dashboard.	
2.2	The system shall ensure that the dashboard displays the following metrics: Total Users, Total Shipments, Total Carriers, Tickets Raised, Total Claims, etc.	

2.3	The system shall ensure that, on the dashboard, the admin will be able to view the following items: a navigation bar on the left side and key metrics on the main screen, such as: • Total Users • Total Shipments • Total Carriers • Tickets Raised • Total Claims • Shipments (Status) as a separate complete section • Total Revenue Generated • Graphs related to the most frequent customers/locations • A list of recent shipments in table format with details such as shipment ID, location, payment, carrier, and status.	The system shall ensure that all metrics are accurately fetched from the backend, and that all counts are correct.
2.4	• The system shall ensure that with graphs and metrics, there will be a calendar icon. When clicked, a calendar filter will open, allowing the user to view metrics according to selected dates. • The system shall ensure that user will be able to filter through ○ Carriers ○ Shippers/USERS ○ The system shall ensure that on selection kpis shall change.	
2.5	The system shall ensure that the admin will also be able to see the navigation bar with the following items: • User Management • Carrier Management • Roles and Permissions • Payments/Finances • Manual Entry • Support and Claims • Settings • Requests and Approvals	

2.6	The system shall ensure that when the user clicks on any navigation menu item, they will be redirected to the corresponding screen.	
-----	---	--

FRD 3: User Management

ID	Description	Images/Notes
3.1	The system shall ensure that when the admin clicks on "USER MANAGEMENT" from the dashboard navigation menu, they are redirected to the admin screen.	
3.2	The system shall ensure that when the admin is on the main users screen, they will be able to see the list of all users in a table format.	
3.3	- The system shall ensure that the admin will be able to see the details of the users, such as: - Name - ID - Business Details - Registered Date - Total Shipments - Total Revenue by User - Carriers Shipped Through - Action: Edit/Delete - The system shall ensure that all user details are fetched properly with accurate information. - The system shall ensure that when the admin clicks on the action column, they will see two options: delete the user or edit the user's information. - The system shall ensure that if the admin clicks on "edit," they will be able to edit the user's information (the same sign-up details form will open with pre-filled data). - The system shall ensure that when the admin clicks on "delete," they will be able to delete the user, but before confirming, they will be prompted to select a reason from a dropdown for the deletion.	

	○ The system shall ensure that once the admin selects the reason from the dropdown, the user will be successfully deleted.	
3.4	● The system shall ensure that the admin will be able to see filters and a search bar at the top of the screen. ● The system shall ensure that the admin can apply filters, such as date, carrier, and location, and the results will be displayed accordingly. ● The system shall ensure that based on the applied filters, accurate results will be shown. ● The system shall ensure that when the admin searches for any shipment ID, user name, or location, all related users shall be displayed. ○	
3.5	The system shall ensure that there will also be an "Add New Customer" button on the screen.	
3.6	● The system shall ensure that upon clicking the "Add New Customer" button, a new screen will appear with the same details required as in the sign-up form, including: ○ First Name ○ Last Name ○ Business Name ○ DBA (Doing Business As) ○ Business Number ○ Industry Type ○ Email ○ Phone Number ○ Shipping Types (e.g., Pallet, Packages, E-commerce) ● The system shall ensure that in the next step, the user is required to provide the following business information: ○ Business Mailing Address ○ Unit Number ○ State ○ Country ○ ZIP Code ○ City	Same process for the user to be followed for signing up.

3.7	The system shall ensure that once the admin creates the detailed user profile, the admin will receive a notification for verification of the newly created user.	
3,8	• The system shall ensure that when the admin clicks on a specific user from the table list, they will be navigated to the user detail screen, where they will be able to see the following information: ○ A list of all shipments by the user with proper details. ○ Shipment details and If ANY CROSS border doc for specific shipment that too. ○ The system shall ensure that admin will be able to view additional fields/sections displaying the following: ○ - Commission Percent: The percentage of commission applied to the user. ○ - Discount Percent: The percentage of discount applied to the user. • The system shall ensure that when the admin further clicks on a shipment ID, they will be able to view the shipment detail page. ○ The system shall ensure that the admin will be able to see all the details related likely shipment/pickup and rates.	
3.9	• The system shall ensure that the admin will be able to see all the saved and recent quotes by the user too. • The system shall ensure that when the admin clicks on the user detail screen there they will be able too see a section for the saved and recent quotes to some extent • The system shall ensure that by clicking view all the admin will be navigated to the screens where admin will be able to see the complete list of recent and saved quotes by the each user if any that is not converted into shipment.	

FRD 4: Requests and Approvals

ID	Description	Images/Notes
4.1	• The system shall ensure that when the admin clicks on the approval section from the dashboard, the admin will be able to see the approval screen. • The system shall ensure that the admin will be able to see the list of sign-up requests in a table format.	
4.2	• The system shall ensure that the admin will be able to view the following details in the table: ○ User Name ○ Date Requested ○ Action: Approve / Reject • The system shall ensure that the admin must click on a single request to view the details	
4.3	• The system shall ensure that when the admin clicks on a single request, a pop-up screen will appear with all the details provided by the user. • The system shall ensure that the admin will manually verify the details and respond to the action (Approve/Reject).	
4.4	• The system shall ensure that if the admin approves the request, credentials will be created automatically based on the user's name and sent to the admin's email. • The system shall ensure that if the admin rejects the request, the admin must provide a reason for rejection. • The system shall ensure that after reviewing the user sign-up request, if the admin wants to reject it and clicks on the reject button, a form will appear with the following fields: ○ Reason Dropdown: The admin must select a reason for rejection. ○ Text Field: For additional descriptions or comments.	
4.5	The system shall ensure that once the admin fills out the form, they can reject the request, and the rejection will be sent to the user's	

	email address provided during sign-up. The user can then fix the issues and resend the request for approval.	
4.6	• The system shall ensure that the admin can search requests using the user's name. • The system shall ensure that the admin can use a date filter to view specific requests. • The system shall ensure that the admin can use the sorting function to sort the latest requests.	
	PLATFORM REVENUE AND USER COMMISSIONS	
4.7	• The system shall ensure that when the admin approves any user from the approval section, a form will appear in front of the admin. This form will contain two fields related to commission and discount settings for the approved user: • - Commission Percent: A field for the admin to input the percentage of commission charged to the user on every transaction. • - Discount Percent: A field for the admin to input the percentage discount to be offered to the user. The admin can either input the values as counters or select from a dropdown.	
4.8	• The system shall ensure that the values entered by the admin in the Commission Percent and Discount Percent fields are stored in the system against the specific user. ◦ These values will be used for all future transactions made by the user.	
4.9	• The system shall ensure that whenever the approved user places a shipment order through API-connected carriers, the final price displayed will be a combination of the following: ◦ The API-fetched carrier rate for the shipment. ◦ The admin-set commission percent applied to the carrier rate. OR ◦ The admin-set discount percent applied to the final price.	
4.10	• The system shall ensure that the commission and discount percentages stored against each user are automatically applied to every shipment transaction initiated by the user.	

	○ These commission and discount values will be reflected alongside the carrier pricing.	
4.11	● The system shall ensure that the final rates and invoices presented to the user after a shipment order includes: ○ - The carrier rates fetched from the API. ○ - The admin-set commission percentage applied to the carrier rate. ○ - The admin-set discount percentage deducted from the total. This ensures that the platform's charges are transparent to the user in every transaction.	
4.12	● The system shall ensure that in the future, if the admin needs to adjust the commission or discount percentage for a specific user, they will be able to do so easily through the user management screen.	
4.13	● The system shall ensure that when the admin clicks on a user's details from the User Management section, they will be navigated to the user profile. Here, the admin will be able to view additional fields/sections displaying the following: ○ - Commission Percent: The percentage of commission applied to the user. ○ - Discount Percent: The percentage of discount applied to the user.	
4.14	● The system shall ensure that the admin will be able to edit and update the values in the Commission Percent and Discount Percent fields. ○ The admin can enter the updated percentages, which will immediately be reflected in the system for future shipments initiated by the user.	
4.15	● The system shall ensure that when the admin updates the commission or discount percentages, the changes are properly saved in the database and stored against the specific user. ○ These updated values should be applied automatically during the user's next shipment transaction.	
4.16	● The system shall ensure that the updated commission and discount percentages are reflected properly on the user side	

	during their next shipment transaction, affecting the final rate calculation based on the updated values.	
--	---	--

FRD 5: Carrier Management

ID	Description	Images/Notes
5.1	- The system shall ensure that when the admin clicks on Carrier Management, they will be navigated to the Carrier Management screen. - The system shall ensure that the admin will be able to see the list of carriers integrated with the system in a table or list format, including carrier name and integration date.	
5.2	The system shall ensure that the admin will be able to see the total number of shipments made through each carrier in the table format as well.	
5.3	- The system shall ensure that there will be an on/off toggle button in front of each carrier, which the admin can toggle according to the need to show or hide the carrier on the user-facing side. - The system shall ensure that the admin can toggle specific carriers on or off depending on what needs to be shown at the front end.	
5.4	- The system shall ensure that the admin can enable or disable specific carriers for the platform. - If a carrier's services are unavailable, the admin can deactivate them temporarily.	
5.5	- The admin can enter and manage carrier details manually for carriers that do not provide API integration. - The system shall ensure that admin will be able to see the button for adding carrier Add Carrier and on clicking which form will open and in which below things will be available.:	

	○ The admin can input key information such as carrier name, and contact details in the form. ○ For offline carriers, the admin can manually create carriers while creating a manual entry or beforehand too.	
5.6	● The system shall ensure that admins can edit these rates and settings at any time to keep them up-to-date or make adjustments as needed based on new agreements or changes in services.	
	MANUAL CARRIERS SECTION	
5.7	The system shall ensure that the Carrier Management screen will now display two distinct sections: ● API Carriers: A table or list format showing carriers integrated via API. ● Manual Carriers: A separate section displaying carriers manually added by the admin.	
5.8	● The system shall ensure that there is a clear distinction between API carriers and manual carriers. ○ A toggle or filter will be provided for the admin to switch between viewing API-integrated carriers and manually added carriers. ○ The manual carriers will function entirely independently of the API. ○ For API Carriers, the admin will still be able to turn them on or off from being visible on the user-facing side. ○ For Manual Carriers, this toggle will function similarly, but without affecting any API integrations.	

5.9	The system shall ensure that the existing table showing carriers will now have two distinct views or sections: • API Carrier Section: Lists only the carriers that are integrated through API. • Manual Carrier Section: Lists carriers that have been manually added by the admin, functioning separately from any API integration.	

FRD 6: Manual Entry

ID	Description	Images/Notes
6.1	• The system shall ensure that when the admin clicks on Manual Entry, they are navigated to the manual entry screen where they can view a list of entries manually created on behalf of users. • The system shall ensure that if the user sees that the API rates are too high then he can contact the admin for manual shipment in less amount through a ticket. The user needs to generate a ticket and then the admin will create a manual entry on his behalf.	
6.2	• The system shall ensure that the admin can view the details of these entries in a list format, including: ○ Shipment ID ○ User Name ○ Carrier ○ Locations ○ (POL /SHIPPING LABEL) ○ Status ○ Action buttons (Edit/Delete, depending on the status of the entry)	

6.3	The system shall ensure that search functionality and filters are available for the admin to search for specific entries. Filters such as date, location, and carrier will help the admin refine the search results.	
6.4	• The system shall ensure that the admin can see a "Create New Shipment" button on the manual entry screen. When clicked, the admin will be able to create a shipment on behalf of a user. The process will follow the same steps as regular users, requiring the following details: • Shipment Locations: The admin will enter "Ship From" and "Ship To" addresses. • Shipment Details: The admin will input shipment specifics, such as package type (e.g., pallet, package), weight, dimensions, and any special services required. • Carrier Selection: The admin can select a carrier from the available list or manually add carriers or can also add carrier names in real time. • The system shall ensure that the admin will be able to select the user from the dropdown. • Rates and Charges: The admin apply shipping rates for the selected carrier. • The system shall ensure that once admin add those details pol/shipping label will be generated. • The system shall ensure that the admin will be also able to see the invoice generated automatically or by clicking on generate invoice button against that shipment generated manually with all the above details. ○ The admin will be able to download in the form of pdf.	
6.5	• The system shall ensure that once all shipment details are filled in, the admin can save or submit the shipment. • The system shall ensure that admin will be able to send the pol/shipping labels to the associated email. • The system shall ensure that admin will be also able to add multiple emails by clicking on add more emails for sending pol/shipping labels.	

FRD 7: Payments/Invoices

ID	Description	Images/Notes
7.1	The system shall ensure that when the admin clicks on the Payments module, they are navigated to the payments screen, where they can view a list of all payments made in a table format.	
7.2	• The system shall ensure that the admin can view the following details in the table: ○ User Name ○ Shipment ID ○ Carrier Name ○ Payment Amount ○ Payment Method ○ Status ○ Shipping Status ○ Payment Status ○ Action: Approve/Reject • The system shall ensure that the admin can apply filters, such as date, to view payments accordingly.	
7.3	• The system shall ensure that the admin can download invoices for each payment. These invoices will contain detailed information about charges, including a breakdown of costs between the company and each carrier. • The admin will be able to see both user invoice and admin invoice.	
7.4	The system shall provide functionality for the automated generation of invoices based on contracted rates and actual shipment data. Admins will also have the option to manually enter or adjust invoices in cases of discrepancies or errors in shipment data. The system shall ensure that the admin will download the invoice and edit it and then again can upload against that.	
7.5	The system shall ensure that admins can track the status of all payments and verify user payments before releasing shipments. This manual verification is particularly important for payments made through non-credit card methods, such as checks, email transfers, or other alternative payment methods.	

7.6	• The system shall give the admin the ability to view, approve, or reject payment transactions and see proofs for email transfers or cheques. • The system shall ensure that the admin will be able to see the payments such as cheque/email transfer payments related to the user/shipping id in the admin section ○ The system shall ensure that the admin will be able to see the details. See proofs and verify the payment. ○ The system shall ensure the user will be notified once the payment is verified.	
-----	---	--

FRD 8: Reporting

ID	Description	Images/Notes
8.1	• The system shall ensure that when the admin clicks on the Reporting module, they are navigated to the reporting and analytics section. • The system shall ensure that the admin can see a list of generated reports. • The system shall ensure that the list of reports is displayed in a table format with the following details: • Report Name • Date Generated • Actions: Download, Delete	
8.2	• The system shall ensure that there is a search functionality for finding previously generated reports. • The system shall ensure that the admin can use filters, such as timestamp and date, to view reports within a specific range.	

8.3	The system shall ensure that by clicking on a specific report or the download button in the action column, the report will be downloaded in XLS or PDF format.	
8.4	• The system shall ensure that the admin can generate a new report by clicking on the Generate Report button and selecting the appropriate criteria. • The admin will need to select the following: ○ Type of report (e.g., shipment, users, financial, or carriers) ○ Date range ○ Format (XLS or PDF)	
8.5	The system shall ensure that the admin can view the generated report in XLS or PDF format after selecting the criteria.	
8.6	• The system shall allow the admin to generate system usage reports (. shipment volumes, active users). • The system shall allow the admin to generate financial reports (, total revenue, carrier costs, unpaid invoices).	

FRD 9: Claims and Support

ID	Description	Images/Notes
9.1	• The system shall ensure that when the admin clicks on Claims and Support, they will be able to see the main screen. • The system shall ensure that the main screen is divided into two sections: one for Claims and one for Support Tickets.	
9.2	• The system shall ensure that search and filter functionality is available, allowing the admin to search based on filters such as date. • The system shall ensure that the admin can view data filtered by the selected date.	

9.3	Claims Section: • The system shall ensure that the admin can see the list of claims in a table format with the following details: ○ Claim ID ○ User Name ○ Date ○ Status: Pending, Resolved • The system shall ensure that when the admin clicks on a specific claim or view icon, they will be able to see the claim form, which includes the user's name, shipment ID, and details of the issue. • After reviewing the issue, the admin can either contact the customer or change the claim status. • The system shall ensure that when the issue is resolved, the admin can go to the status section and change the status to Approved using a dropdown menu. • The system shall ensure that once the admin updates the status, they are presented with a form to write details about how the issue was resolved in a text field.	
9.4	Support/Ticket Section: • The system shall ensure that the admin can see the list of support tickets in a table format with the following details: ○ Ticket ID ○ User Name ○ Date ○ Status: Pending, Resolved • The system shall ensure that when the admin clicks on a specific ticket or view icon, they will be able to see the ticket form with the user's name, shipment ID, and details of the issue. • After reviewing the issue, the admin can either contact the customer or change the ticket status. • The system shall ensure that when the issue is resolved, the admin can go to the status section and change the status to Approved using a dropdown menu. • The system shall ensure that once the admin updates the status, they are presented with a form to write details about how the issue was resolved in a text field.	

	The system shall ensure that there will be an action column in the table with options to delete or view specific claims/tickets.	
	EMAIL TO TICKET CONVERTER	
9.5	- The system shall ensure that emails sent to the business email from clients are automatically converted into support tickets in the system. - Each ticket will include: - Client's Name - Client's Email Address - Subject Line - Email Body (Query Details) - Attachments (if any)	
9.6	The system shall ensure that the generated tickets appear in a list format in the support/ticket dashboard. Each ticket will display: - Ticket ID - Client Name - Date Received - Email Subject - Ticket Status (Open, Pending, Resolved) - Action Buttons (View/Reply)	
9.7	- The system shall ensure that when the admin replies to a ticket in the system, the reply will be sent as an email to the client. - The reply will include: - Subject Line - Admin's Response Content - Ticket Reference Number	
9.8	The system shall ensure that email attachments are automatically included in the ticket.	

	Admins can view and download attachments directly from the ticket.	
9.9	- The system shall ensure that admins can update the ticket status (Open, Pending, Resolved). - A notification will be sent to the client when the status changes.	
9.10	- The system shall ensure that tickets are automatically categorized based on the email subject line or keywords in the email body. - Admins can modify the ticket category if necessary. - The system shall ensure that admins are notified when a new ticket is created from an email. - The system shall ensure that when a ticket is resolved and closed, a confirmation email is sent to the client. - The email will contain a link allowing the client to reopen the ticket if needed.	

FRD 10: Notifications

ID	Description	Images/Notes
10.1	- The system shall ensure that when the admin clicks on the Notifications section from the dashboard, they will be able to see a list of notifications. - The system shall ensure that the admin can view a list of notifications and reminders, which will be sorted based on date, time, title, and message.	
10.2	- The system shall ensure that the admin can mark notifications and reminders as read or unread. - The system shall ensure that the admin has the option to delete or archive notifications.	

10.3	• The system shall ensure that the admin can filter and sort notifications/reminders based on criteria such as: ○ Date ○ Time ○ Title ○ Type (e.g., email or in-platform notifications)	
10.4	The system shall ensure that the admin can manage notification preferences, including the ability to opt for: • Email notifications • Platform-based notifications • Both email and platform-based notifications	

FRD 11: Roles and Permissions

ID	Description	Images/Notes
6.1	The system shall allow the admin to create new roles with custom permissions.	Permissions can control access to different modules.
6.2	The system shall ensure that roles can be edited and updated as necessary.	Roles can include limited access to financial data, user management, or carrier settings.
6.3	The system shall allow the admin to assign roles to new or existing users.	
6.4	The system shall ensure that when the admin clicks on roles and permission he will be able to see the list of the users with the following details: User name Role access Permission level Action: edit/delete/block	

6.5	The system shall ensure that the admin can see the add new user button there and select from the existing users to assign a new role. The system shall ensure that the admin will be able to see the following things in the form: Select user: dropdown Role level: dropdown Permission level: dropdown Create.	
6.6	The system shall ensure that the admin can create new users by following the user creation mentioned in the User management.	

User Stories: Admin

Admin FRD 1: Login

1. Navigating to the Admin Login Screen

- **User Story:** As an admin, I want to be redirected to the admin login screen when I click on the admin link so that I can access the login functionality.
- **Acceptance Criteria:**
 - **Given:** The admin is on any page within the platform or outside the platform.
 - **When:** The admin clicks on the provided admin link.
 - **Then:** The system should redirect the admin to the admin login screen, displaying the login fields.

2. Viewing Email and Password Fields

- **User Story:** As an admin, I want to see the email and password fields on the login screen so that I can provide my credentials to log in.
- **Acceptance Criteria:**
 - **Given:** The admin is on the login screen.
 - **When:** The login screen loads.
 - **Then:** The system should display the email and password input fields along with a "Login" button.

3. Login with Authenticated Credentials

- **User Story:** As an admin, I want to log in with my email and password so that I can access the admin functionalities of the platform.
- **Acceptance Criteria:**
 - **Given:** The admin is on the login screen.
 - **When:** The admin enters valid email and password credentials and clicks the "Login" button.
 - **Then:** The system should authenticate the admin and redirect them to the admin dashboard.
 - **And:** The system should ensure that only authenticated admins can access the admin panel.

4. Forgot Password Functionality

- **User Story:** As an admin, I want to be informed to contact another admin if I forget my password, so I can regain access to the system.
- **Acceptance Criteria:**
 - **Given:** The admin is on the login screen and has forgotten their password.
 - **When:** The admin is unable to log in and looks for a password recovery option.
 - **Then:** The system should display a message instructing the admin to contact another admin via email to retrieve their credentials.

Admin FRD 2: Dashboard

1. Viewing the Admin Dashboard After Login

- **User Story:** As an admin, I want to be able to view the dashboard immediately after logging in so that I can see an overview of platform activity.
- **Acceptance Criteria:**
 - **Given:** The admin is logged in.
 - **When:** The admin successfully logs in.
 - **Then:** The system should display the dashboard with an overview of key platform metrics, navigation options, and recent activities.

2. Displaying Key Metrics on the Dashboard

- **User Story:** As an admin, I want to see key metrics on the dashboard so that I can monitor platform activity at a glance.
- **Acceptance Criteria:**
 - **Given:** The admin is on the dashboard.
 - **When:** The dashboard is loaded.
 - **Then:** The system should display relevant key metrics, including a summary of platform performance and user activity.

3. Displaying Detailed Metrics and Graphs

- **User Story:** As an admin, I want to see detailed metrics and graphs on the dashboard so that I can have a deeper understanding of platform usage.
- **Acceptance Criteria:**
 - **Given:** The admin is on the dashboard.

- **When:** The dashboard is loaded.
- **Then:** The system should display detailed metrics and relevant graphs that provide insights into platform performance and user behavior.

4. Accurate Fetching of Metrics from the Backend

- **User Story:** As an admin, I want all metrics to be fetched accurately from the backend so that I can rely on real-time data for decision-making.
- **Acceptance Criteria:**
 - **Given:** The admin is on the dashboard.
 - **When:** The system loads key metrics and graphs.
 - **Then:** The system should fetch real-time, accurate data from the backend, ensuring that all displayed information is correct.

5. Filtering Metrics by Date Using Calendar Icon

- **User Story:** As an admin, I want to filter metrics by specific dates using a calendar icon so that I can view data relevant to a particular period.
- **Acceptance Criteria:**
 - **Given:** The admin is on the dashboard.
 - **When:** The admin clicks on the calendar icon.
 - **Then:** The system should display a date filter.
 - **And:** When the admin selects a date or date range, the system should filter the displayed metrics accordingly.

6. Viewing the Navigation Bar on the Dashboard

- **User Story:** As an admin, I want to see a navigation bar on the dashboard that gives me access to various platform management modules so that I can easily navigate through the system.
- **Acceptance Criteria:**
 - **Given:** The admin is on the dashboard.
 - **When:** The dashboard is loaded.
 - **Then:** The system should display a navigation bar with relevant options for platform management.

7. Navigating to Different Modules from the Dashboard

- **User Story:** As an admin, I want to be able to click on any navigation menu item and be redirected to the corresponding screen so that I can manage different sections of the platform efficiently.
- **Acceptance Criteria:**

- **Given:** The admin is on the dashboard.
- **When:** The admin clicks on a specific navigation menu item (e.g., User Management, Carrier Management).
- **Then:** The system should redirect the admin to the corresponding module or section of the platform.

Admin FRD 3: User Management

1. Navigating to the User Management Screen

- **User Story:** As an admin, I want to be redirected to the user management screen when I click on "User Management" from the dashboard navigation menu so that I can manage platform users efficiently.
- **Acceptance Criteria:**
 - **Given:** The admin is logged in and on the dashboard.
 - **When:** The admin clicks on "User Management" from the navigation menu.
 - **Then:** The system should redirect the admin to the user management screen, where a list of users is displayed in a table format.

2. Viewing the List of Users

- **User Story:** As an admin, I want to see a list of users in a table format so that I can manage and review user information.
- **Acceptance Criteria:**
 - **Given:** The admin is on the user management screen.
 - **When:** The user management screen loads.
 - **Then:** The system should display a table of users with all necessary details, fetched accurately from the backend.

3. Editing User Information

- **User Story:** As an admin, I want to be able to edit a user's information so that I can update their profile with correct and up-to-date data.
- **Acceptance Criteria:**
 - **Given:** The admin is on the user management screen.
 - **When:** The admin clicks the "Edit" option for a specific user.
 - **Then:** The system should display the user's details in an editable form.
 - **And:** The admin should be able to modify the necessary fields.

- **And:** After making changes, the admin should be able to save the updated information.

4. Deleting a User with Reason Prompt

- **User Story:** As an admin, I want to be able to delete a user after selecting a reason for deletion so that I can remove users who no longer need access to the platform.
- **Acceptance Criteria:**
 - **Given:** The admin is on the user management screen.
 - **When:** The admin clicks the "Delete" option for a specific user.
 - **Then:** The system should prompt the admin to select a reason for deletion from a dropdown.
 - **And:** Once the admin selects a reason and confirms, the user should be successfully deleted.

5. Using Filters and Search in User Management

- **User Story:** As an admin, I want to use filters and search functionality to quickly find specific users or user information so that I can efficiently manage the user list.
- **Acceptance Criteria:**
 - **Given:** The admin is on the user management screen.
 - **When:** The admin applies filters (e.g., by date, location) or uses the search bar.
 - **Then:** The system should display the filtered or searched results based on the admin's criteria.

6. Adding a New Customer

- **User Story:** As an admin, I want to add a new customer by providing their personal and business details so that they can start using the platform.
- **Acceptance Criteria:**
 - **Given:** The admin is on the user management screen.
 - **When:** The admin clicks the "Add New Customer" button.
 - **Then:** The system should display a form that mirrors the user sign-up process, where the admin can input the customer's details.
 - **And:** Once the admin submits the form, the user profile should be created, and the admin should receive a notification for verification.

7. Viewing User Details, Shipments, and Cross-Border Docs

- **User Story:** As an admin, I want to view detailed information for a specific user, including their shipments and cross-border documents, so that I can manage their activities.
- **Acceptance Criteria:**
 - **Given:** The admin is on the user management screen.
 - **When:** The admin clicks on a specific user.
 - **Then:** The system should navigate to the user's detail screen, displaying information related to their shipments and documents.
 - **And:** When the admin clicks on a shipment ID, they should be taken to a detailed view of that shipment, showing relevant information.

8. Viewing and Managing User Quotes

- **User Story:** As an admin, I want to see a list of saved and recent quotes for each user so that I can track any quotes that have not been converted into shipments.
- **Acceptance Criteria:**
 - **Given:** The admin is on the user detail screen.
 - **When:** The admin views the quotes section.
 - **Then:** The system should display both saved and recent quotes for that user.
 - **And:** When the admin clicks "View All," they should be navigated to a screen showing the complete list of quotes.

9. Fetching Accurate Data for All User Details

- **User Story:** As an admin, I want to ensure that all user details (personal information, business information, shipments, and quotes) are fetched accurately from the backend so that I can rely on up-to-date data.
- **Acceptance Criteria:**
 - **Given:** The admin is viewing the user management or user detail screens.
 - **When:** The admin interacts with the data on the screen.
 - **Then:** The system should fetch and display all user-related details accurately from the backend, ensuring no data inconsistencies.

Admin FRD 4: Requests and Approvals

1. Navigating to the Approval Section

- **User Story:** As an admin, I want to be redirected to the approval section from the dashboard so that I can view pending sign-up requests for approval.

- **Acceptance Criteria:**
 - **Given:** The admin is logged in and on the dashboard.
 - **When:** The admin clicks on the "Approval" section in the navigation menu.
 - **Then:** The system should navigate to the approval screen where sign-up requests are displayed in a table format.

2. Viewing the List of Sign-Up Requests

- **User Story:** As an admin, I want to see a list of all pending sign-up requests in a table format so that I can easily manage and review new user registration requests.
- **Acceptance Criteria:**
 - **Given:** The admin is on the approval screen.
 - **When:** The screen loads.
 - **Then:** The system should display a table with sign-up requests, including the user's name and date requested, along with action buttons for approval or rejection.

3. Viewing the Details of a Sign-Up Request

- **User Story:** As an admin, I want to be able to view the full details of a sign-up request so that I can verify the information provided by the user before taking action.
- **Acceptance Criteria:**
 - **Given:** The admin is on the approval screen.
 - **When:** The admin clicks on a specific sign-up request.
 - **Then:** A pop-up window should appear with the full details provided by the user.
 - **And:** The admin should be able to manually verify the details in the pop-up.

4. Approving a Sign-Up Request

- **User Story:** As an admin, I want to approve a valid sign-up request so that the user can receive their credentials and access the platform.
- **Acceptance Criteria:**
 - **Given:** The admin is viewing a specific sign-up request.
 - **When:** The admin clicks the "Approve" button.
 - **Then:** The system should automatically generate the user's credentials based on their name and send the credentials to the admin's email.

5. Rejecting a Sign-Up Request

- **User Story:** As an admin, I want to reject a sign-up request and provide a reason for rejection so that the user knows why their request was declined.
- **Acceptance Criteria:**
 - **Given:** The admin is viewing a specific sign-up request.
 - **When:** The admin clicks the "Reject" button.
 - **Then:** The system should display a form where the admin can select a reason for rejection from a dropdown menu.
 - **And:** The system should allow the admin to enter additional comments in a text field if necessary.
 - **And:** Once the admin submits the form, the rejection message should be sent to the user's email with the reason and any additional comments.

6. Handling Rejected Requests

- **User Story:** As an admin, I want users to be notified when their sign-up request is rejected so that they can fix any issues and resubmit their application.
- **Acceptance Criteria:**
 - **Given:** The admin has rejected a sign-up request.
 - **When:** The rejection is processed.
 - **Then:** The system should send a notification to the user's email, explaining the reason for rejection.
 - **And:** The user should be able to resubmit their request after addressing the issues.

7. Searching Sign-Up Requests by User Name

- **User Story:** As an admin, I want to search for specific sign-up requests using a user's name so that I can quickly find a particular request for review.
- **Acceptance Criteria:**
 - **Given:** The admin is on the approval screen.
 - **When:** The admin enters a user's name in the search bar.
 - **Then:** The system should display all requests matching the search criteria.

8. Filtering Sign-Up Requests by Date

- **User Story:** As an admin, I want to filter sign-up requests by the date they were submitted so that I can review requests from a specific time period.
- **Acceptance Criteria:**
 - **Given:** The admin is on the approval screen.
 - **When:** The admin applies a date filter.

- **Then:** The system should display only the sign-up requests submitted within the specified date range.

9. Sorting Sign-Up Requests by Date

- **User Story:** As an admin, I want to sort the list of sign-up requests by the date they were submitted so that I can prioritize reviewing the latest or oldest requests first.
- **Acceptance Criteria:**
 - **Given:** The admin is on the approval screen.
 - **When:** The admin clicks on the column header for the "Date Requested" field.
 - **Then:** The system should sort the sign-up requests in ascending or descending order based on the date.

Admin FRD 5: Carrier Management

1. Navigating to the Carrier Management Screen

- **User Story:** As an admin, I want to be navigated to the Carrier Management screen when I click on "Carrier Management" so that I can manage the platform's integrated carriers.
- **Acceptance Criteria:**
 - **Given:** The admin is logged in and on the dashboard.
 - **When:** The admin clicks on "Carrier Management."
 - **Then:** The system should navigate to the Carrier Management screen, displaying a list of integrated carriers in a table or list format.

2. Viewing the List of Carriers

- **User Story:** As an admin, I want to see a list of all integrated carriers in a table format so that I can review and manage the carriers used in the platform.
- **Acceptance Criteria:**
 - **Given:** The admin is on the Carrier Management screen.
 - **When:** The screen loads.
 - **Then:** The system should display a table or list format showing the carrier names and the date each carrier was integrated.

3. Viewing Total Shipments by Carrier

- **User Story:** As an admin, I want to view the total number of shipments made through each carrier so that I can track the volume of shipments for each integrated carrier.
- **Acceptance Criteria:**
 - **Given:** The admin is on the Carrier Management screen.
 - **When:** The screen loads.
 - **Then:** The system should display the total number of shipments made through each carrier in the table.

4. Toggling Carriers On/Off for User Visibility

- **User Story:** As an admin, I want to toggle specific carriers on or off so that I can control whether a carrier is visible to users on the front end.
- **Acceptance Criteria:**
 - **Given:** The admin is on the Carrier Management screen.
 - **When:** The admin clicks the toggle button in front of a specific carrier.
 - **Then:** The system should enable or disable the carrier's visibility on the user-facing side of the platform.

5. Enabling or Disabling a Carrier

- **User Story:** As an admin, I want to enable or disable a carrier's service so that I can temporarily deactivate carriers if their services are unavailable.
- **Acceptance Criteria:**
 - **Given:** The admin is on the Carrier Management screen.
 - **When:** The admin toggles a carrier to "Disabled."
 - **Then:** The system should mark the carrier as inactive, and the carrier should not be available for new shipments.

6. Manually Adding a New Carrier

User Story: As an admin, I want to be able to add a new carrier by clicking an "Add Carrier" button so that I can input key carrier information and create carrier records, including offline carriers for manual entries.

Acceptance Criteria:

- **Given:** The admin is logged into the system.
- **When:** The admin clicks on the "**Add Carrier**" button.

- **Then:**
 - The system should open a form where the admin can input key carrier information such as **carrier name** and **contact details**.
 - The system should also allow the admin to manually create **offline carriers** either while creating a **manual entry** or beforehand.

Admin FRD 6: Manual Entry

1. Navigating to the Manual Entry Screen

User Story: As an admin, I want to be able to navigate to the manual entry screen by clicking on the **"Manual Entry"** button so that I can view and manage manually created entries for shipments on behalf of users.

Acceptance Criteria:

- **Given:** The admin is logged into the system.
- **When:** The admin clicks on the **"Manual Entry"** button.
- **Then:** The system should navigate the admin to the manual entry screen, where they can view a list of manually created entries.

2. User Requesting a Manual Shipment Due to High API Rates

User Story: As a user, I want to be able to contact the admin through a ticket if API shipping rates are too high so that a manual shipment can be created at a potentially lower rate.

Acceptance Criteria:

- **Given:** The user sees that API rates are too high.
- **When:** The user generates a support ticket requesting a manual shipment.
- **Then:** The system should notify the admin, who can create a manual entry on behalf of the user.

3. Viewing Manual Entry Details

User Story: As an admin, I want to be able to view a list of manually created shipment entries, including important details like **Shipment ID**, **User Name**, **Carrier**, **Locations (POL/Shipping Label)**, **Status**, and **Action Buttons** so that I can manage these entries effectively.

Acceptance Criteria:

- **Given:** The admin is on the manual entry screen.
- **When:** The admin views the list of manual entries.
- **Then:** The system should display the list in a detailed format including **Shipment ID**, **User Name**, **Carrier**, **Locations**, **Status**, and **action buttons (Edit/Delete)**, depending on the status).

4. Searching and Filtering Manual Entries

User Story: As an admin, I want to be able to search and filter manually created shipment entries based on criteria like **date**, **location**, and **carrier** so that I can find specific entries quickly and easily.

Acceptance Criteria:

- **Given:** The admin is on the manual entry screen.
- **When:** The admin uses the search bar or filter options.
- **Then:** The system should allow the admin to filter results by **date**, **location**, and **carrier** and display the relevant entries.

5. Creating a New Manual Shipment

User Story: As an admin, I want to be able to create a new shipment manually by clicking on the **"Create New Shipment"** button so that I can assist users with their shipping needs when required.

Acceptance Criteria:

- **Given:** The admin is on the manual entry screen.
- **When:** The admin clicks the **"Create New Shipment"** button.
- **Then:**
 - The system should present a form for the admin to create a shipment on behalf of a user.
 - The admin should be able to enter **Shipment Locations** (e.g., **Ship From** and **Ship To** addresses).
 - The admin should be able to provide **Shipment Details** like **package type** (e.g., pallet, package), **weight**, **dimensions**, and **special services required**.
 - The admin should be able to select a carrier from an available list or manually add a carrier in real time.
 - The admin should be able to select the user from the dropdown.
 - The admin will be able to enter the rates in the rate field.
 - The system should generate a **POL/Shipping Label** once all details are filled in.

6. Generating and Viewing the Invoice

User Story: As an admin, I want the system to automatically generate an invoice for the manually created shipment or allow me to click a **"Generate Invoice"** button so that I can review and provide accurate billing details.

Acceptance Criteria:

- **Given:** The admin has completed the shipment creation.
- **When:** The shipment is saved or submitted.
- **Then:** The system should either automatically generate an invoice or allow the admin to click on **"Generate Invoice"** to produce the invoice, including all shipment details.

7. Saving or Submitting the Manual Shipment

User Story: As an admin, I want to be able to save or submit the manual shipment after entering all details so that the shipment can be processed accordingly.

Acceptance Criteria:

- **Given:** The admin has filled in all the shipment details.
- **When:** The admin clicks **"Save"** or **"Submit"**.
- **Then:** The system should either save the shipment details as a draft or submit them for processing.

8. Sending Shipping Labels via Email

User Story: As an admin, I want to be able to send **POL/Shipping Labels** to the user's email address so that they can receive all the necessary shipping documentation.

Acceptance Criteria:

- **Given:** The shipment has been created.
- **When:** The admin clicks on the **"Send Shipping Label"** button.
- **Then:** The system should allow the admin to enter one or multiple email addresses to send the **POL/Shipping Labels**.

9. Adding Multiple Emails for Shipping Labels

User Story: As an admin, I want to be able to add multiple email addresses for sending **POL/Shipping Labels** by clicking on an **"Add More Emails"** button so that multiple stakeholders can receive the shipping documentation.

Acceptance Criteria:

- **Given:** The admin is sending shipping labels.

- **When:** The admin clicks on the **"Add More Emails"** button.
- **Then:** The system should provide additional fields to enter more email addresses, and the **POL/Shipping Labels** should be sent to all listed addresses.

Admin FRD 7: Payments/Invoices

1. Navigating to the Payments Screen

- **User Story:** As an admin, I want to be navigated to the payments screen when I click on the "Payments" module so that I can manage and review all payment-related information.
- **Acceptance Criteria:**
 - **Given:** The admin is logged in and on the dashboard.
 - **When:** The admin clicks on the "Payments" module.
 - **Then:** The system should navigate to the payments screen, where a list of all payments is displayed in an organized format.

2. Viewing Payment Details

- **User Story:** As an admin, I want to view the relevant details of all payments so that I can track payment-related information and take necessary actions.
- **Acceptance Criteria:**
 - **Given:** The admin is on the payments screen.
 - **When:** The screen loads.
 - **Then:** The system should display all relevant payment details in a list format, allowing the admin to manage payments effectively.
 - **And:** The admin should be able to filter the payments by different criteria such as date.

3. Downloading Invoices for Payments

- **User Story:** As an admin, I want to download invoices for each payment so that I can review the details of charges and maintain a record for future reference.
- **Acceptance Criteria:**
 - **Given:** The admin is on the payments screen.
 - **When:** The admin selects a payment and chooses the option to download the invoice.

- **Then:** The system should allow the admin to download the invoice, containing all necessary information about charges and breakdowns.

4. Automated and Manual Invoice Generation

- **User Story:** As an admin, I want the system to automatically generate invoices based on agreed rates and shipment data, with the option to manually adjust invoices if discrepancies or errors are found, so I can maintain accuracy.
- **Acceptance Criteria:**
 - **Given:** The admin is managing payments and invoices.
 - **When:** The system generates invoices automatically for completed shipments.
 - **Then:** The admin should be able to manually adjust or edit the invoice if needed.
 - **And:** The admin should be able to upload the updated invoice back to the system after making edits.

5. Tracking Payment Status and Verifying Payments

- **User Story:** As an admin, I want to track the status of all payments so that I can ensure payments are verified before shipments are processed or released.
- **Acceptance Criteria:**
 - **Given:** The admin is on the payments screen.
 - **When:** The admin selects a payment to verify.
 - **Then:** The system should allow the admin to check the payment status, especially for non-automated payment methods, ensuring verification before proceeding with the shipment.

6. Approving or Rejecting Payment Transactions

- **User Story:** As an admin, I want to approve or reject payment transactions so that I can ensure only valid and verified payments are processed, especially for non-automated payments.
- **Acceptance Criteria:**
 - **Given:** The admin is on the payments screen.
 - **When:** The admin selects a payment.
 - **Then:** The system should provide an option to either approve or reject the payment.
 - **And:** For non-automated payments, such as checks or transfers, the admin should be able to confirm whether the payment has been cleared before releasing the shipment.

Admin FRD 8: Reporting

1. Navigating to the Reporting Module

- **User Story:** As an admin, I want to be navigated to the reporting and analytics section when I click on the "Reporting" module so that I can view, generate, and manage reports.
- **Acceptance Criteria:**
 - **Given:** The admin is logged in and on the dashboard.
 - **When:** The admin clicks on the "Reporting" module.
 - **Then:** The system should navigate the admin to the reporting section, where a list of generated reports is displayed.

2. Viewing the List of Generated Reports

- **User Story:** As an admin, I want to see a list of previously generated reports in an organized format so that I can manage existing reports efficiently.
- **Acceptance Criteria:**
 - **Given:** The admin is on the reporting screen.
 - **When:** The screen loads.
 - **Then:** The system should display the generated reports in a list, along with options to perform actions such as downloading, editing, or deleting the reports.

3. Searching and Filtering Reports

- **User Story:** As an admin, I want to search for specific reports and apply filters so that I can find previously generated reports within a specific range or based on other criteria.
- **Acceptance Criteria:**
 - **Given:** The admin is on the reporting screen.
 - **When:** The admin uses the search bar or applies filters such as date or timestamp.
 - **Then:** The system should display the reports that match the search or filter criteria.

4. Downloading Reports

- **User Story:** As an admin, I want to download reports in my preferred format so that I can review and share the information easily.
- **Acceptance Criteria:**

- **Given:** The admin is viewing a list of reports.
- **When:** The admin clicks the download option for a specific report.
- **Then:** The system should allow the admin to download the report in either XLS or PDF format.

5. Generating New Reports

- **User Story:** As an admin, I want to generate new reports by selecting specific criteria so that I can obtain updated information on shipments, users, or financials.
- **Acceptance Criteria:**
 - **Given:** The admin is on the reporting screen.
 - **When:** The admin clicks the "Generate Report" button.
 - **Then:** The system should display a form where the admin can select the type of report, date range, and the preferred format (XLS or PDF).
 - **And:** Once the admin submits the criteria, the system should generate the requested report.

6. Viewing Generated Reports

- **User Story:** As an admin, I want to view the reports I have generated in XLS or PDF format so that I can easily analyze the data.
- **Acceptance Criteria:**
 - **Given:** The admin has generated a report.
 - **When:** The report is generated.
 - **Then:** The system should allow the admin to open and view the report in the chosen format.

7. Generating System Usage and Financial Reports

- **User Story:** As an admin, I want to generate reports on system usage, financial data, and other metrics so that I can track important performance indicators.
- **Acceptance Criteria:**
 - **Given:** The admin is generating a report.
 - **When:** The admin selects the type of report, such as system usage or financial data.
 - **Then:** The system should allow the admin to generate reports on specific metrics like shipment volumes, revenue, costs, and unpaid invoices.

Admin FRD 9: Claims and Support

1. Navigating to the Claims and Support Module

- **User Story:** As an admin, I want to navigate to the claims and support section when I click on "Claims and Support" so that I can manage both claims and support tickets.
- **Acceptance Criteria:**
 - **Given:** The admin is logged in and on the dashboard.
 - **When:** The admin clicks on the "Claims and Support" section.
 - **Then:** The system should navigate the admin to a screen divided into two sections: one for claims and one for support tickets.

2. Searching and Filtering Claims/Support Tickets

- **User Story:** As an admin, I want to search for claims and support tickets and apply filters so that I can easily find specific items to manage.
- **Acceptance Criteria:**
 - **Given:** The admin is on the claims and support screen.
 - **When:** The admin uses the search bar or applies filters such as date.
 - **Then:** The system should display claims or tickets matching the search or filter criteria.

3. Viewing and Managing Claims

- **User Story:** As an admin, I want to view claims in a structured format so that I can manage them efficiently and update their status as needed.
- **Acceptance Criteria:**
 - **Given:** The admin is on the claims section of the screen.
 - **When:** The screen loads.
 - **Then:** The system should display claims in an organized format with relevant details, allowing the admin to view and manage each claim.
 - **And:** When the admin clicks on a specific claim, they should be able to see all the claim details and update the claim status after reviewing the information.

4. Resolving Claims and Changing Status

- **User Story:** As an admin, I want to resolve claims and update their status so that I can track the progress of each claim and communicate outcomes to users.
- **Acceptance Criteria:**
 - **Given:** The admin is viewing a claim.

- **When:** The admin resolves the claim.
- **Then:** The system should allow the admin to change the status of the claim and provide details about how it was resolved in a text field.

5. Viewing and Managing Support Tickets

- **User Story:** As an admin, I want to view and manage support tickets efficiently so that I can address user issues in a timely manner.
- **Acceptance Criteria:**
 - **Given:** The admin is on the support section of the claims and support screen.
 - **When:** The screen loads.
 - **Then:** The system should display a list of support tickets in an organized format, allowing the admin to view and manage each ticket.

6. Resolving Support Tickets and Changing Status

- **User Story:** As an admin, I want to resolve support tickets and update their status so that I can communicate outcomes to users and maintain efficient customer support.
- **Acceptance Criteria:**
 - **Given:** The admin is viewing a support ticket.
 - **When:** The admin resolves the issue.
 - **Then:** The system should allow the admin to change the status of the ticket and provide details about how it was resolved in a text field.

7. Categorizing Support Tickets and Using Templated Responses

- **User Story:** As an admin, I want to categorize support tickets and use templated responses for common queries so that I can resolve issues faster.
- **Acceptance Criteria:**
 - **Given:** The admin is managing support tickets.
 - **When:** The admin selects a support ticket.
 - **Then:** The system should allow the admin to categorize the ticket and apply templated responses for quicker resolution.

Admin FRD 10: Notifications

1. Navigating to the Notifications Section

- **User Story:** As an admin, I want to navigate to the notifications section from the dashboard so that I can view all system notifications and reminders.
- **Acceptance Criteria:**
 - **Given:** The admin is logged in and on the dashboard.
 - **When:** The admin clicks on the "Notifications" section.
 - **Then:** The system should navigate to the notifications screen, displaying a list of notifications and reminders.

2. Viewing the List of Notifications and Reminders

- **User Story:** As an admin, I want to see a list of notifications and reminders organized by key details so that I can track system alerts efficiently.
- **Acceptance Criteria:**
 - **Given:** The admin is on the notifications screen.
 - **When:** The screen loads.
 - **Then:** The system should display a list of notifications and reminders, organized by relevant information such as the time and title.

3. Marking Notifications as Read or Unread

- **User Story:** As an admin, I want to be able to mark notifications and reminders as read or unread so that I can keep track of which notifications require my attention.
- **Acceptance Criteria:**
 - **Given:** The admin is viewing the notifications list.
 - **When:** The admin selects a notification.
 - **Then:** The system should provide options to mark the notification as read or unread.

4. Archiving and Deleting Notifications

- **User Story:** As an admin, I want to delete or archive notifications and reminders that are no longer relevant so that I can keep the notification list organized.
- **Acceptance Criteria:**
 - **Given:** The admin is viewing the notifications list.
 - **When:** The admin selects one or more notifications.
 - **Then:** The system should provide options to delete or archive the selected notifications.

5. Filtering and Sorting Notifications

- **User Story:** As an admin, I want to filter and sort notifications by different criteria so that I can easily find and manage specific notifications.
- **Acceptance Criteria:**
 - **Given:** The admin is on the notifications screen.
 - **When:** The admin applies filters or sorting criteria.
 - **Then:** The system should display filtered or sorted notifications based on the selected criteria, such as date, title, or notification type.

6. Managing Notification Preferences

- **User Story:** As an admin, I want to manage my notification preferences so that I can choose whether to receive notifications via email, platform-based alerts, or both.
- **Acceptance Criteria:**
 - **Given:** The admin is managing their notifications.
 - **When:** The admin selects the option to manage notification preferences.
 - **Then:** The system should allow the admin to choose their preferences for email notifications, platform-based notifications, or both.
