

Functional Requirements Document (FRD)

Project Name: Oohup Marketplace

Module: Advertiser Module

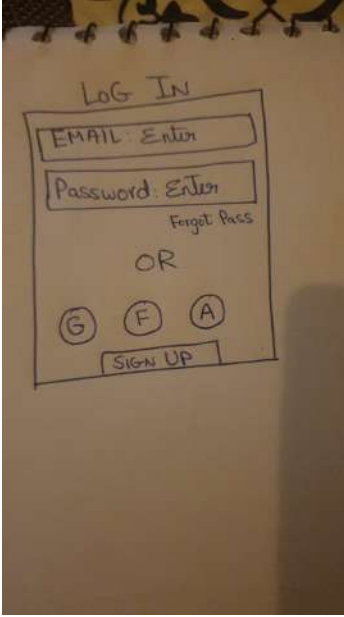

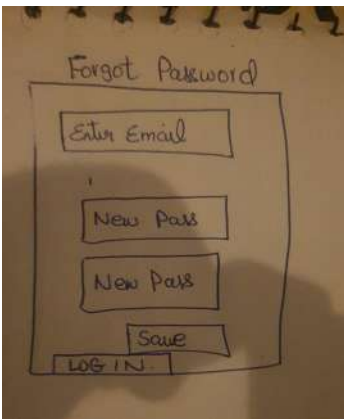

1. Introduction

This document outlines the functional requirements for the Advertiser Module in the Oohup Marketplace platform. The purpose of this document is to detail the necessary features, use cases, user stories, and acceptance criteria to guide the development and design of the Platform.

2. Functional Requirements:

1- Login

BRD#	FRD ID	Description	Images/Notes
------	--------	-------------	--------------

	1.1	• The system shall ensure that when user clicks on Login, he is navigated to the login screen successfully. • The system shall ensure that when user is logged in he is redirected to the dashboard successfully.	
	1.2	The system shall ensure that when the user clicks the Login button from the promotional website, he is also successfully redirected to the login screen.	
	1.3	• The system shall ensure that user will be able to login through email or password. • The system shall ensure that user will be able to login through socials, such as Facebook, google, apple.	The system shall give error on entering wrong/email password. The system shall give explanatory error on problems in logging with socials.
	1.4	• The system shall ensure that if the user forgets the password or email he can revert the credentials by clicking on Forgot Password. • The system shall ensure that on the forgot password page user have to enter the registered email address and on which user will be receiving the link to create new password.	

			User shall be redirected to the forgot password page.
	1.5	The system shall ensure that user will be able to redirect to Sign Up page, when clicked on Sign up from Login Page.	

Use Cases - Login FRD

- User navigates to the login screen by clicking the "Login" button.
- User clicks the "Login" button from the promotional website and is redirected to the login screen.

User logs in using email and password:

- User enters email and password.
- User clicks the "Login" button.
- The system authenticates the credentials.
- The system displays an error message if the email or password is incorrect.

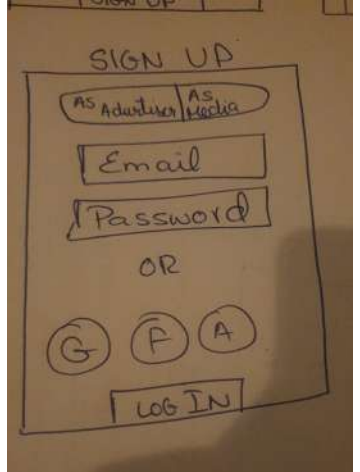

User logs in using social accounts:

- User selects a social login option (Facebook, Google, Apple).
- The system redirects the user to the selected social platform's authentication page.
- User logs in using social account credentials.
- The system authenticates the social login and redirects the user back to the platform.
- The system displays an explanatory error message if there is a problem with social login.

User forgets password or email:

- User clicks the "Forgot Password" link.
- The system redirects the user to the "Forgot Password" page.
- User enters email to receive password reset instructions.
- The system sends a password reset email to the user.
- User clicks the link in the email and is redirected to a page to reset the password.

2- Sign Up

BRD#	FRD ID	Description	Images/Notes
	2.1	The system shall ensure that the user is directed to the "Sign Up" or "Get Started" page when clicking on the "Get Started" or "Sign Up" buttons.	
	2.2	• The system shall ensure that when the user clicks "Get Started," they are first presented with a pop-up or screen asking them to confirm if they are an advertiser or a media owner. • The system shall ensure that upon selecting "Advertiser," the user is directed to the sign-up page.	Toggle can be provided on sign-up screen as media owner or advertiser.
	2.3	The system shall ensure that the user can sign up successfully and is then redirected to the dashboard as an Advertiser.	• The user shall be prompted that the account has been created successfully. • The created user details shall be stored in the database.

Use Cases - SIGN UP FRD

- User clicks the "Get Started" or "Sign Up" button and is directed to the "Sign Up" or "Get Started" page.
- User clicks "Get Started" and is presented with a toggle option on the sign-up screen to choose between "Advertiser" or "Media Owner."
- User selects "Advertiser" on the pop-up or confirmation screen.
- User completes the sign-up process successfully by entering email/password or through social logins.
- User is redirected to the dashboard after successful sign-up.
- User is identified as an advertiser after completing the sign-up process.

3- Dashboard

BRD#	FRD ID	Description	Images/Notes
2.2 DAHSBO ARD	3.1	• The system shall ensure that when the user clicks on the "Browse Inventory" or "Find Listing" CTA, they are redirected to the dashboard screen. • The system shall ensure that user is not required to login/sign up to expose with the dashboard screen.	
	3.2	The system shall ensure that the user can perform all functions such as searching, applying filters, and seeing listings without any interruption	
	3.3	The system shall ensure that when the user is on the dashboard screen, the following items are available in NAVBAR: • Home • Create a Campaign • Campaign Cart • Saved	

		• OOHUP Logo • Account • Measurement and Analytics	
FILTERS DASHBA ORD	3.4.	1- The system shall ensure that user is able to apply filters and will be able to select from: • Search • Campaign Length ◦ Template ◦ Start Date ◦ End Date • Retail/In- Store • Media Type • Media Sub Type • Media Category • Size • Map View • List View • Add More Filters Button: ◦ Audience Demographics ◦ Campaign Metrics ◦ Budget ◦ Vendors/Media Owners 2- The system shall ensure that on selection of filters user will be to select filters accordingly as below: ◦ The system shall provide two buttons for media type selection: Traditional and In-Store. ◦ The system shall ensure that if user selects traditional filter then following further filters with data fields can be shown: 2.1.1 Campaign Length • Template Campaign Lengths	

		○ Short-Term Campaigns: ■ 1 Week Campaign: Suitable for time-sensitive promotions or events. ■ 2 Week Campaign: Mid-duration campaign for building awareness. ○ Traditional 4 Week Campaigns: ■ Standard campaign duration for sustained visibility. ○ Long-Term Campaigns: ■ 8 Week Campaign: Ideal for long-term brand-building efforts. ■ 12 Week Campaign: Extended exposure for maximum impact. ○ Enter Duration Manually ● Start and End Date ○ The system shall allow users to select the start and end dates for their campaigns. 2.1.2 Search Location ● City, State, or Zip Code ○ The system shall allow users to search for media units by entering a city, state, or zip code. ● Radius from a Specific Point ○ The system shall allow users to specify a radius from a particular location (e.g., 5 miles from downtown). ● Specific Landmarks or Points of Interest ○ The system shall allow users to search for media units near specific landmarks or points of interest. ● Search by Keyword ○ The system shall allow users to search for points of interest by name or type (e.g., "coffee shop," "mall"). ○ The system shall ensure that when a user enters a location name (e.g.,	
--	--	---	--

		'Motor City') in the search bar, the map displays pins around the specified location. ○ The system shall ensure that when a user enters a keyword (burger, gym) or points of interest (Burj Khaleefa, Schools) in the Search bar (e.g., 'Coffee Shop, School, Burj Khaleefa, Mcdonalds, Cafe, Gym, Burger etc') in the search bar, the map displays pins around and inside the specified locations with above keywords these can be media units and retail/venue pins both. List Panel is also populated with the same pins as map. ○ 2.1.3 Traditional Media Filters ● Media Category and Subcategory ○ The system shall provide the following media categories and subcategories for traditional media: ■ Inventory Types: ■ Billboards: ■ Bulletins ■ Wallscapes ■ Posters ■ Uni Poles / Lamp Poles ■ Bridges ■ Hoardings ■ Tunnels ■ Traditional Billboards ■ Digital Billboards ■ 3D Billboards ■ Street Furniture Media: ■ Bus Shelter ■ Phone Booth/News	
--	--	--	--

		Stands/Food Stands/Bike Stands ■ Metro Shelter ■ Tram Shelter ■ Street Pillars ■ Transits Media: ■ Food Trucks wraps ■ Metro/Tram/Bu s (Internal/Extern al) ■ Taxi Tops ■ Pop up Billboards ■ Place Based Media: ■ Restaurants/Ca fes ■ Isolated concentrated Media (Lifts/Rest rooms) (Apartments/Off ices) ■ Metro Stations/Bus Stations ■ Shopper Centric Places (Malls/Food Courts) ■ Gyms/Sport Arenas ■ Medical Offices (Hospitals/Clini cs) ■ Academic Centers (Coaching Schools, Schools,
--	--	--

		Colleges, Universities) ■ Transit Advertising: ■ Bus Wraps ■ Subway Car Ads ■ Taxi Tops ■ Train Station Posters ■ Tram Exteriors ■ Street Furniture: ■ Bus Shelter Ad Panels ■ Bench Advertising ■ Information Kiosks ■ Public Toilets with Ads ■ Newsstand Displays ■ Phone Booth Advertising ■ Airport Advertising: ■ Terminal Displays ■ Baggage Claim Ads ■ Security Checkpoint Screens ■ Digital Screens: ■ Digital Billboards ■ LED Screens ■ Digital Transit Displays ■ Digital Mall Screens ■ Posters: ■ Standard Posters ■ 30-Sheet Posters ■ 8-Sheet Posters ■ Mobile Billboards: ■ Trucks with Digital Displays ■ Ad Bikes ■ Wrapped Vehicles ■ Ad Vans ■ Stadium Advertising: ■ Scoreboard Ads ■ Concourse Displays ■ Seatback Ads ■ Field/Court Branding	
--	--	---	--

		■ Point-of-Purchase Displays: ■ In-Store Displays ■ Shelf Talkers ■ Floor Stickers ■ Checkout Counter Ads ■ In-Store Advertising: ■ Endcap Displays ■ Aisle Banners ■ Digital Screens in Stores ■ Cinema Advertising: ■ Pre-roll Ads ■ Lobby Displays ■ Seatback Ads ■ Guerilla Marketing: ■ Stencil Graffiti ■ Street Art Installations ■ Ambient Advertising Stunts ■ Digital Signage: ■ Interactive Kiosks ■ Video Walls ■ Touchscreen Displays ■ Elevator Advertising: ■ Screen Displays ■ Floor Stickers ■ Mirror Stickers ■ Aerial Advertising: ■ Banners Towed by Aircraft ■ Skywriting ■ Blimps/Zeppelins with Ads ■ Shopping Mall Advertising: ■ Digital Mall Screens ■ Hanging Banners ■ Floor Decals ■ Indoor Billboards: ■ Office Building Lobby Displays ■ Mall Atrium Billboards ■ Outdoor Events Advertising: ■ Concert Posters	
--	--	---	--

		■ Festival Banners ■ Sporting Event Displays ■ Trade Show Booth Branding ■ Wall Murals: ■ Painted Murals ■ Printed Vinyl Murals ■ Interactive Experiences: ■ Augmented Reality (AR) Campaigns ■ QR Code Activations ■ Interactive Projections	
		3- The system shall ensure that once the user selects a media type and sub media type, they will be able to select a category such as, this will be also treated as a separate filter. ● Static ● Digital 4- In store filters: The system shall ensure that the following filters are available for In-Store advertising: 1. Retail Type ○ Grocery stores ○ Clothing shops ○ Electronics stores ○ Restaurants and cafes ○ Gyms and fitness centers ○ Others (as specified) 2. Media Units Available ○ POS Terminal Payment Slips ● POS Slip Ad (Front Side) ● POS Slip Ad (Back Side)	

		○ Digital Screens ■ LCD and LED displays in lobbies, hallways, cafeterias, and other high-traffic areas ■ Interactive kiosks ○ Light Boxes ■ Illuminated displays for vibrant and attention-grabbing advertisements ■ Located in corridors, reception areas, and common spaces ○ Panaflexes ■ Flexible, durable, and high-quality printed banners ■ Suitable for various internal locations such as walls, ceilings, and event spaces ○ Posters and Banners ■ Printed materials displayed in break rooms, conference rooms, and near entrances ■ Can be temporary or permanent fixtures ○ Floor Graphics ■ Adhesive graphics placed on floors in entrances, exits, and hallways ■ Used for directional messaging or branding ○ Elevator Ads ■ Posters, digital screens, or wraps inside elevators ■ Captures attention during transit within the building ○ Table Tents and Counter Cards ■ Small advertisements placed on tables in cafeterias, break rooms, and meeting rooms ○ Window Clings ■ Adhesive graphics applied to windows and glass surfaces within the office ○ Restroom Ads	
--	--	--	--

		■ Posters or digital screens placed in restrooms ○ Cafeteria or Break Room Ads ■ Digital displays, posters, and table tents in areas where employees gather for meals and breaks ○ Interactive Display Panels ■ Touchscreen panels in key areas for engaging advertisements and informational content ○ Branded Merchandise Displays ■ Prominent placement of branded items in common areas for promotional purposes ○ Wall Murals ■ Large-scale printed or painted advertisements on internal walls ○ Internal Transit Ads ■ Ads placed inside company shuttle buses or other internal transportation vehicles ○ Event Signage ■ Temporary banners, posters, and digital displays for internal events such as town halls, training sessions, and corporate meetings ○ Intranet Banners ■ Digital banner ads on the company's internal network or intranet pages ○ Screensavers and Desktop Wallpapers ■ Company-wide screensavers or wallpapers on employee computers featuring promotional content ○ Corporate Intranet Homepage Takeovers	
--	--	---	--

		■ High-visibility ad placements on the homepage of the company's intranet 3. Media Unit Location inside Venue ○ Entrance ○ Checkout Area ○ High Traffic Areas ○ Window Display ○ Common Spaces 4. Media Unit Size 5. Transaction Volume ○ High transaction locations ○ Medium transaction locations ○ Low transaction locations 6. Store Profile ○ Luxury/high-end stores ○ Budget/discount stores ○ All types 7. Customer Demographics ○ Specific to store customer base (age, gender, income) 8. Campaign Duration ○ Short-term (1-2 weeks) ○ Standard (4 weeks) ○ Long-term (8 weeks or more) 9. Store Size and Layout ○ Small, medium, large stores ○ Specific sections within the store (entrance, checkout area, aisles) 10. Brand and Ad Compatibility ○ Accepted Ad Categories ○ Rejected Ad Categories ○ All Categories 5 - The system shall ensure that selecting each filter provides interactive results, allowing users to view and refine their choices based on selected criteria.	
--	--	---	--

		6 - The system shall ensure that the user can see the selected filter in its active state, providing clear indication of applied filters. 7 - The system shall allow users to set minimum and maximum price limits for filtering media spots based on price range. Instore Marker and Units Checkout: • The system shall ensure that when the user selects the in-store filter and searches for anything related to in-store, they will only see the legend/marker related to venues/shops. • The system shall ensure that the user will see the marker or legend for shops/venues accurately based on the search and filter. • The system shall ensure that when the user clicks on a specific marker, they will be shown a detailed card screen as described, with an additional segmented tab for units. • The system shall ensure that when the user clicks on the units tab, they will be able to see all the units related to that shop or venue within that tab screen. • The system shall ensure that when the user clicks on any specific unit, they will be able to see the complete unit detail screen. • The system shall ensure that on the unit detail screen, the user will see a "Submit to Campaign" or "Add to Campaign" button, which will trigger the checkout action as outlined in the checkout flow for in-store units.	
--	--	---	--

Sorting Functional ity List View	3.5	SORTING Functionality: The system shall ensure that the user is able to apply sorting such as: ● Relevance: ○ Based on search query and filters applied ● Price: ○ Lowest to highest ○ Highest to lowest ● Impressions: ○ Highest to lowest ○ Lowest to highest ● Audience Reach: ○ Largest to smallest ○ Smallest to largest ● Alphabetical Order: ○ A to Z ○ Z to A ○ ○ Sort Functions for In-Store Advertising: ● Transaction Volume: ○ Highest to lowest ○ Lowest to highest ● Store Profile: ○ High-end to budget ○ Budget to high-end ● Price: ○ Lowest to highest ○ Highest to lowest ● Customer Demographics: ○ Age, gender, income alignment ● Impressions: ○ Highest to lowest ○ Lowest to highest	
---	-----	---	--

	3.6	The system shall ensure that, below the filters section, the user can also select listing options such as: • Show All (Divided) • In-Store (Retail/Venue Ads) • Outdoor • Available for Rent on Select Date (This will include spots/media units where OOHUP has already confirmed that the unit is available and not booked during the selected time)	• User will be able to see all the listings based on these selected states. • System shall ensure that user will be able to see all the listings correctly.
	3.7	The system shall ensure that when the user applies filters for listings, the map and list display results instantly, and both the Listing and map results are interactive.	Results shall shown instantly and interactively accorindg to change in search filters.
Media Unit Count and Search	3.8	Location Search: • The system shall ensure that when a user enters a location name (e.g., 'Motor City') in the search bar, the map displays pins around the specified location. • The system shall ensure that when a user enters a keyword (e.g., 'burger', 'gym') or points of interest (e.g., 'Burj Khalifa', 'Schools') in the search bar, the map displays pins around and inside the specified locations with these keywords. These pins may represent both media units and retail/venue locations. • The list panel shall be populated with the same pins displayed on the map. Location Display Section: • The system shall ensure that the location display section on the side of the dashboard updates to show relevant data for the searched location.	• The system shall ensure that whenever the user uses the search bar to search for a location, the location display section is populated with counts and footfall data corresponding to the search results with location name correctly. • Number of Listing shall be divided as Traditional Outdoor listings and In-store / Retailers • The system shall ensure that the map and list will

		• The system shall ensure that the footfall data displayed is derived from annual census data or other reliable sources. • The system shall ensure that the location display section also provides population data as an annual census figure. Media Unit Count: • The system shall ensure that the location display section shows the total count of media units available in the searched location (e.g., Motor City, Dubai). The total count will be displayed according to media types (e.g., In-store locations, traditional OOH units). Footfall, Audience, and Demographic Info Data: • The system shall ensure that the location display section shows the average monthly footfall data for the searched location. • The system shall ensure that the average monthly footfall is based on the most recent data available and is updated as the user interacts with the map or search functionality. • The system shall ensure the same update frequency and data accuracy for road traffic data and population density data.	show all the listings successfully according to the search based on filters. • The system shall ensure that all listings shown are uploaded by media owners, and users can see these based on their search.
MAP Legends	3.9	• The system shall ensure that listings on the map are differentiated through distinct legends. • The system shall provide separate legends for different media types and categories, including but not limited to: ○ Traditional Outdoor Media: ■ Billboards ■ Street Furniture ■ Transit Media ■ Place-Based Media ■ Airport Advertising	

		■ Posters ■ Mobile Billboards ■ Stadium Advertising ■ Point-of-Purchase Displays ■ In-Store Advertising ■ Cinema Advertising ■ Guerilla Marketing ■ Digital Signage ■ Elevator Advertising ■ Aerial Advertising ■ Shopping Mall Advertising ■ Indoor Billboards ■ Outdoor Events Advertising ■ Wall Murals ■ Interactive Experiences ○ In-Store/Retail Media: ■ POS Terminals ● POS Terminal Payment Slip Ads (Front and Back of Slips) ■ Digital Screens ■ Interactive Kiosks ■ Light Boxes ■ Panaflexes ■ Posters and Banners ■ Floor Graphics ■ Elevator Ads ■ Table Tents and Counter Cards ■ Window Clings ■ Restroom Ads ■ Cafeteria or Break Room Ads ■ Interactive Display Panels ■ Branded Merchandise Displays ■ Wall Murals ■ Internal Transit Ads ■ Event Signage ■ Intranet Banners ■ Screensavers and Desktop Wallpapers	
--	--	--	--

		■ Corporate Intranet Homepage Takeovers Tooltip Details: ● For General Listings: ○ The system shall ensure that when a user hovers over a specific listing or legend, a tooltip appears showing: ■ Image of the listing ■ Media Type ■ Size ■ Impression ■ Name of the location ■ Tooltip will appear above the listing. ● For In-Store Retail/Venue Listings: ○ The system shall ensure that when a user hovers over a specific listing or legend that is an in-store listing (retail/venue), a tooltip appears showing: ■ Image of the listing ■ Name of Retail and Category ■ Media Type ■ Size ■ Media Item Location inside Venue ■ Impression ■ Location inside retail (e.g., Front counter, Hall, etc.) ■ Tooltip will appear above the in-store media listing.	
Detailed Card Traditional	3.10	1. Detailed Pop-Up Card The system shall ensure that when a user clicks on a specific listing or legend, a detailed pop-up card opens on the right side, displaying:	User Interaction ● Add to Campaign: If clicked, the listing will be added to the user's campaign cart.

		• Images: Visual representations of the media unit. • Ad Description: Brief description of the advertisement. • Ad Type: Specifies the type of ad (e.g., House). • Ad Availability: Indicates whether the ad is for rent or booked. • Ad Price: The price field will show "\$200" but will be hidden until the user logs in. A tag will indicate the price is hidden. Hovering over this tag will show a tooltip prompting the user to log in/sign up. • Ad Size: Specifies the size of the media unit (e.g., Medium). • CTAs: Two call-to-action buttons: ○ "Add to Campaign": Adds the listing to the user's campaign cart. ○ "View Details": Opens the detailed view of the listing. 2. Traditional Media Unit Detail Popup Data Fields When the user clicks on "View Details," the system shall ensure the detailed screen displays: • Media Unit Name: The name or ID of the media unit. • Location: ○ Address ○ City, State, Zip Code ○ GPS Coordinates • Media Type: Type of media (e.g., billboard, transit ad, digital screen). • Media Subtype: Specific subtype of the media. • Size and Dimensions: ○ Physical dimensions (height, width). • Availability: ○ Available Dates ○ Booking Duration Options	The system shall ensure that when the user clicks on "Campaign Cart," they can view the added campaigns. • View Details: Clicking this will open a detailed screen with the above information.
--	--	---	---

		● Pricing: ○ Cost per Week/Month ○ Total Cost for Selected Duration ● Impressions: ○ Estimated Number of Views or Impressions ○ Reach and Frequency Metrics ● Audience Demographics: ○ Age, Gender, Income, and other relevant demographics. ● Location Details: ○ Footfall ○ Road Traffic ○ Points of Interest Nearby ● Photos and Visuals: ○ Images or Renderings of the Media Unit ○ Surrounding Area Views ● Orientation: ○ Front, Back, Both Sides ● Ad Creative: ○ Vinyl Print / Digital (image/video, etc.) ○ Print Specification File (size and print guide file) ● Additional Notes: Any special conditions or notes relevant to the media unit. 3. Detailed Screen View Details: ● Name of the Listing: Displayed with an icon differentiating the category. ● List of Images: Images for the listing. ● Tabs: The system shall show segmented tabs as follows: ○ Photos (Default Tab): Shows images. ○ Audience Tab The system shall ensure that Audience Contains three further tabs for detailed audience-related data Audience Tab	
--	--	--	--

		● The system shall ensure that on clicking the Audience tab, the user is presented with three further tabs for detailed audience-related data: ○ Demographics: This tab will contain data from the traffic data APIs such as: ■ Sex (Male/Female) ■ Age data based on different age scenarios ○ Economic/Housing: ■ Economics: This section will contain: ■ Median household income ■ Per capita income ■ Persons below the poverty line ■ Housing: This section will contain: ■ Population ■ Housing units ■ Households ■ Moved since previous year ■ Persons per household ○ Education/Miscellaneous: ■ Education: This section will contain: ■ High school graduate or higher ■ Bachelor's degree ■ Miscellaneous: This section will contain: ■ Mean travel time to work ■ Population veteran status ■ Non-English speaking households ■ Foreign-born population	
--	--	---	--

		• The system shall ensure that the right half of the detailed screen displays unit details and impressions in which Unit will be including: ○ Ad Type ○ Impressions ○ Ad Size ○ Creative Type ○ Price ** ○ Illumination ○ Geo Location ○ Zip Code ○ Attribution (Same as media detailed pop above one) • The system shall ensure that impressions section will contain following: ○ 4 Week Impression ○ Weekly Impression ○ CPM	
Detailed Card In Store	3.11	The system shall ensure that when the user clicks "View Details" for an in-store media unit, the detailed screen will include the following information: • Retail Type: ○ Type of store (e.g., grocery, clothing, electronics). • Media Unit Description: ○ Description of the media unit (e.g., POS terminal slip, LED lightbox). • Media Unit location inside Venue: ○ Entrance/Exit Area -also add Textbox to mention the specific location as per venue type ○ Checkout/Cashregister Area -also add Textbox to mention specific location as per venue type	

		○ High Traffic Area- also add Textbox to mention specific location as per venue type ○ Window Display -also add Textbox to mention specific location as per venue type ○ Common Spaces - also add Textbox to mention specific location as per venue type ○ ● Store Profile: ○ Description of the store's customer base (e.g., high-end, budget). ● Transaction Volume: ○ Estimated number of transactions per day/week. ● Store Images: ○ Visual representation of the store and the media unit's placement. ● Customer Demographics: ○ Age: ○ Gender: ■ Breakdown by gender for each age group. ○ Income: ■ Estimated income ranges of the customers. ● Footfall, Daily Visitor, Peak Hours: ○ Foot Fall: ■ Number of people entering the store. ○ Daily Visitor: ■ Average number of visitors per day. ○ Peak Hours: ■ Times of day with the highest traffic. ● Store Name and Location: ○ Store Name ○ Location: ● Business Segment:	
--	--	--	--

		○ Category of the retail store (e.g., coffee shop, apparel store, electronics store). ● Projected Reach: ○ Estimates of potential reach and impact based on historical data and current traffic patterns. ● Brand Compatibility: ○ Store Description: ■ Description of the store's branding and market position. ○ Accepted Ads Categories: ■ List of ad categories the retail store accepts (e.g., fashion, electronics, food and beverage, local events). ○ Restricted Ad Categories: ■ List of ad categories the store does not accept (e.g., political ads, alcohol, tobacco, adult content). ○ Complimentary Business: ■ Similar stores and related businesses (e.g., coffee bean manufacturers, services). ● In-Store Media Units Types: ○ Media Unit Locations: ■ Details on media unit placements, dimensions, and ad format requirements. ○ Examples: ■ Digital Screens: ■ Location ■ Dimensions ■ Creative Details ■ Posters ■ Light Box Display Stand ■ POS Terminal Front Slip (QR CODE) ■ POS Terminal Back Slip ● Photos: ○ Visuals of the media unit and its placement within the store.	
--	--	--	--

		● Pricing: ○ Cost per Week/Month: ■ Pricing structure for the media unit. ○ Total Cost for Selected Duration: ■ Cost based on user-selected booking duration. ○ Production Cost Breakdown: ■ Textbox field for a general breakdown of production costs. ● Availability: ○ Available Dates: ■ Dates when the media unit is available for booking. ○ Booking Duration Options: ■ Available options for the length of the booking.	
MAP VIEW VS LIST VIEW BUTTONS:	3.12	● The system shall ensure that if the user clicks on the Map View button, the units will be displayed on a map. ● The map view shall include all interactive map functionalities as defined in previous FRDs, including search, filters, and map legends. List View Button ● The system shall ensure that if the user clicks on the List View button, the units will be displayed in the form of list cards. ● The system shall ensure that each list card will contain the following information: ○ Images ○ Ad Description ○ Ad Type (e.g., House) ○ Ad Availability (e.g., For Rent)	

		○ Ad Price: \$200 (Price will be hidden until the user logs in) ○ Ad Size: Medium ○ Two CTAs: "Add to Campaign" and "View Details" ■ The price field will have a tag indicating it's hidden. When the user hovers over this tag, a tooltip will prompt the user to log in. ● The system shall ensure that there is an option for sorting the list. Users can use sorting functionality accordingly. ● The system shall ensure that upon applying sorting, the list shall change interactively.	
Saved Search	3.13	Save Search Button ● The system shall ensure that when a user is performing a search for units on the dashboard, they can click on the "Save Search" button to save their current search criteria. ● The system shall ensure that the saved search includes all the applied filters and states, including any map functionality used (e.g., draw tool, map layers). Saved Searches Storage ● The system shall ensure that the saved search items are stored and listed in the "Saved" screen. ● The system shall ensure that saved searches are accessible only when the user is signed up or logged in. Accessing Saved Searches ● The system shall ensure that when a user clicks on the "Saved" button from the	User Authentication ● The system shall ensure that the save search functionality is available only to users who are signed up or logged in. ● The system shall prompt the user to sign up or log in if they attempt to use the save search functionality without b

		navigation bar on the dashboard, they are redirected to the "Saved" screen. - The system shall ensure that the "Saved" screen displays the list of saved search items either in map view or list view. Resuming Saved Searches - The system shall ensure that on clicking a specific saved search entry, the user is redirected back to the dashboard. - The system shall ensure that upon being redirected to the dashboard, the user's search criteria are reapplied, allowing them to continue from where they left off.	
MAP VIEW FEATURE S:	3.14	- The system shall provide a range of map functionalities to advertisers for planning and managing their advertising campaigns. These features will include search capabilities, data overlays, interactive tools, and filtering options to enhance the effectiveness of their advertising strategies. - The system shall ensure that when user clicked on MAP layers then user will be able too see the list of all the available map tools - The system shall ensure that POINT OF Interest also available to user there - The system shall ensure that user can select the POI and see the units based on that. - The system shall ensure that users can smoothly zoom and pan for detailed map exploration (Zoom and Pan). - The system shall ensure that users can toggle different data layers (e.g., traffic, public transit routes, population density) on the map (Layer Management).	External Dataset references for data layers : https://www.xmap.ai/data-catalog (Country UAE) depends upon partnership with them - Openstreetmap and overpass turbo (Create our own datasets using webscraping, other datasources and overpass turbo)

		• The system shall ensure that users can include points of interest (POIs) such as restaurants, malls, schools, etc. (POI Integration). • The system shall ensure that users can see tooltips with options when hovering over specific listings/legends, including images and names of the locations (Tooltip on Hover). • The system shall ensure that users can click on a specific listing/legend to open a detailed pop-up card on the right side with ad details (Detailed Pop-up Card). • The system shall ensure that user can Users can add and overlay multiple data layers, including: • Draw tool • POI layer • Demographics layer • Specific data layers Geolocation Search: • The system shall ensure that users can search by specific landmarks, popular places, or points of interest (Landmark Search). • The system shall ensure that users can enter a specific address to find nearby media spots (Address Search). • The system shall ensure that users can find media spots within a certain distance from a given location (Proximity Search). • The system shall ensure that users can search for media spots using specific keywords related to locations, demographics, or media types (Keyword Search). • The system shall ensure that user will be able to look for media units on the basis of the Point of Interest. • The system shall ensure that when user will be adding location for search on adding some keywords, user shall exposed with suggestions.	
--	--	--	--

		Radius Targeting and Draw Tool: • The system shall ensure that users can set specific distances (e.g., 1 km, 5 km) from a central point using customizable radius targeting (Customizable Radius). • The system shall ensure that users can define multiple radii for broader targeting (Multiple Radii). • The system shall ensure that users can visualize overlapping radii to identify optimal targeting zones (Layered Radii). • The system shall ensure that users can draw custom shapes and boundaries on the map to define target areas (Drawing Tools). ○ The system shall ensure that on using the drawing tool user is exposed with proper results for media units ○ The system shall ensure that only the drawn out area results are being shown. Heatmap Overlay (Data Layer): • The system shall ensure that users can visualize areas with high foot traffic using a heatmap overlay (Foot Traffic Data). • The system shall ensure that users can overlay demographic data such as age, gender, and income levels (Demographic Data). • The system shall ensure that users can view foot traffic and demographic data for specific times of day or days of the week (Time-Based Heatmaps). • The system shall ensure that users can overlay data on consumer behaviors and patterns (Behavioral Data). • The system shall ensure that users can view road traffic data on the map (Road Traffic Data). Cluster Management:	
--	--	--	--

		• The system shall ensure that users can group media spots into clusters for simplified planning (Grouping). • The system shall ensure that users can view aggregated performance data for clusters (Cluster Performance). • The system shall ensure that users can customize clusters by media type, location, or other criteria (Cluster Customization). • The system shall ensure that users can automatically group media spots based on predefined criteria (Automated Clustering). Audience Insights (Data Layer): • The system shall ensure that users can view detailed demographic breakdowns for selected areas (Demographic Insights). • The system shall ensure that users can access data on consumer behaviors and patterns in specific locations (Behavioral Insights). • The system shall ensure that users can segment audiences based on various criteria (e.g., interests, purchasing power) (Market Segmentation). • The system shall ensure that users can overlay population density maps to target high-density areas (Population Density). Saved Map Criteria • Save Map Criteria: ○ Users can save selected map criteria, such as POI, radius, and other layers. ○ The saved criteria will be stored in the database. • Load Saved Layers: ○ Users can select and apply saved map layers from a dropdown interface.	
--	--	--	--

Select Campaigns Dropdown	3.15	• The system shall ensure that when a user clicks "Add to Campaign" from the unit card or unit detailed card, it should be added to the campaign cart. • The system shall ensure that when a user logs in or signs up, a default campaign named "Campaign 1" will be created automatically. • The system shall ensure that both logged-in users and regular users can save campaigns. On the dashboard, users will be able to select campaigns from a dropdown menu located near the filter section. • The system shall ensure that when a user selects a specific campaign, they can perform map functions accordingly. When the user changes the campaign, the previous campaign's selections will be stored, and the new campaign's selections will allow the user to apply new filters or map criteria.	• The system shall ensure that users need to be signed in or logged in. • The system shall ensure that campaigns are stored against the user's ID.

Use Cases - Dashboard (FRD)

1 - User Navigates to Dashboard

- **User clicks "Browse Inventory" or "Find Listing" CTA**
 - User clicks on the "Browse Inventory" or "Find Listing" button.
 - The system redirects the user to the dashboard screen.
 - User is not required to login/sign up to view the dashboard.
 - User navigates to the dashboard without logging in or signing up.
 - The system displays the dashboard screen with all available functionalities.

2- Dashboard Functionalities

- **User performs search and applies filters**
 - User enters search criteria in the search bar.
 - User applies various filters such as campaign start and end date, media type, media subtype, etc.

- The system updates and displays the search results based on the applied filters.
- **User views listings without interruption**
 - User performs search and filters without any interruptions.
 - The system ensures smooth operation and displays relevant listings.

3 - Navigation Bar Items

- **User views NAVBAR items on the dashboard**
 - User navigates to the dashboard screen.
 - The system displays the following items in the NAVBAR:
 - Home
 - Create a Campaign
 - Campaign Cart
 - Saved
 - OOHUP Logo
 - Account
 - Measurement and Analytics

4 - Filters Section

- **User uses available filters on the dashboard**
 - User sees the filters section on the dashboard.
 - Filters available include:
 - Search
 - Campaign Length
 - Template
 - Start Date
 - End Date
 - Retail/In-Store
 - Media Type
 - Media Sub Type
 - Media Category
 - Map View
 - List View
 - Add More Filters Button:
 - Audience Demographics
 - Campaign Metrics
 - Budget
 - Vendors/Media Owners
- **User selects traditional media type and further filters**
 - User selects traditional filter.
 - User selects from the following further filters with data fields:
 - Campaign Length

- Template Campaign Lengths
 - Short-Term Campaigns (1 Week, 2 Weeks)
 - Traditional 4 Week Campaigns
 - Long-Term Campaigns (8 Weeks, 12 Weeks)
 - Enter Duration Manually
 - Start and End Date
 - Search Location
 - City, State, or Zip Code
 - Radius from a Specific Point
 - Specific Landmarks or Points of Interest
 - Search by Keyword
 - Media Category and Subcategory
 - Inventory Types (Billboards, Street Furniture, Transit Media, Place-Based Media, Airport Advertising, Digital Screens, etc.)
 - Traditional Media Filters
- **User selects in-store filters**
 - User selects In-Store filter.
 - Filters available include:
 - Retail Type
 - Media Units Available (Digital Screens, Light Boxes, Panaflexes, Posters and Banners, etc.)
 - Transaction Volume
 - Store Profile
 - Customer Demographics
 - Campaign Duration
 - Store Size and Layout
 - Brand and Ad Compatibility

5 - Listing Options

- **User selects listing options below the filters section**
 - User selects from options such as:
 - Show All
 - In House
 - Outdoor
 - Available for Rent
 - The system displays listings based on selected options.

6 - Interactive Map Results

- **User applies filters and interacts with map results**
 - User applies filters for listings.
 - The system updates and displays results on the map instantly and interactively.
- **User searches for a specific location**

- User enters a location name in the search bar.
- The system displays pins around the specified location on the map.
- The system updates the location display section with relevant data, including media unit count and footfall data.

7 - Listings Display and Legends

- **User views listings on the map differentiated by legends**
 - The system shows listings on the map based on filters.
 - Listings are differentiated through distinct legends.
- **User hovers over a listing or legend**
 - User hovers over a listing or legend.
 - The system displays a tooltip with an image and name of the location.

8 - Detailed Pop-Up Card and Unit Details

- **User clicks on a specific listing or legend**
 - User clicks on a listing or legend.
 - The system opens a detailed pop-up card displaying:
 - Images
 - Ad Description
 - Ad Type (e.g., House)
 - Ad Availability (e.g., For Rent)
 - Ad Price (hidden until user logs in)
 - Ad Size
 - Two CTAs: "Add to Campaign" and "View Details"
 - Tooltip prompting user to log in/signup for price visibility
- **User clicks on "Add to Campaign"**
 - User clicks "Add to Campaign".
 - The system adds the listing to the campaign cart.
 - User can view the added campaign in the campaign cart.
- **User clicks on "View Details"**
 - User clicks "View Details".
 - The system opens a detailed screen showing:
 - Name of the listing
 - List of images
 - Segmented tabs: Photos, Audience, and Unit Details
 - Audience tab with detailed data: Demographics, Economic/Housing, Education/Miscellaneous
 - Unit details: Size, Unit Type, Screen Type, etc.
 - Impressions: 4 Week Impression, Weekly Impression, CPM

9 - Map View vs. List View Buttons

- **User switches between Map View and List View**

- User clicks the Map View button.
- The system displays units on a map with interactive functionalities.
- User clicks the List View button.
- The system displays units in the form of list cards with sorting options.

10 - Save Search

- **User saves their search criteria**
 - User performs a search and applies filters.
 - User clicks the "Save Search" button.
 - The system saves the search criteria and lists it in the "Saved" screen.
 - Saved searches are accessible only to authenticated users.
 - User can resume saved searches by clicking on a specific entry.

11 - Map View Features

- **User utilizes map functionalities**
 - Users can zoom and pan for detailed exploration.
 - Toggle different data layers (e.g., traffic, public transit routes).
 - Include points of interest (POIs).
 - View tooltips with images and names of locations on hover.
 - Click on listings/legends to open detailed pop-up cards.
- **User performs geolocation search**
 - Search by landmarks, addresses, or keywords.
 - Use customizable radius targeting and drawing tools.
 - View heatmap overlays for foot traffic and demographic data.
 - Manage clusters and view audience insights.
- **User zooms in and out on the map**
 - User uses zoom controls or scrolls to zoom in or out on the map.
 - The system adjusts the map view to zoom in or out, updating the visible area and displaying detailed or broader map content as applicable.
- **User pans across the map**
 - User clicks and drags the map or uses pan controls to move across different areas.
 - The system shifts the map view according to the user's actions, ensuring all elements and listings are updated based on the new view.
- **User toggles data layers on the map**
 - User selects or deselects data layers from the map layer management options (e.g., traffic, public transit routes).
 - The system updates the map to show or hide the selected data layers, adjusting the map content accordingly.
- **User adjusts layer visibility**
 - User adjusts the opacity or visibility of different layers on the map.
 - The system modifies the visibility of map layers based on user input, allowing for customized map views.

- **User views points of interest on the map**
 - User selects points of interest categories (e.g., restaurants, malls).
 - The system displays relevant POIs on the map according to the selected categories, with icons representing different types of POIs.
- **User clicks on a POI**
 - User clicks on a POI icon on the map.
 - The system opens a tooltip or pop-up with information about the selected POI, including details such as name, address, and type.

12 - Tooltip on Hover

- **User hovers over a listing or legend**
 - User hovers the cursor over a listing or legend on the map.
 - The system displays a tooltip showing the image and name of the location or listing, providing a brief preview.
- **User clicks on a tooltip**
 - User clicks on a tooltip or a specific listing/legend.
 - The system opens a detailed pop-up card with comprehensive information about the listing or location.

13 - Detailed Pop-Up Card

- **User clicks on a listing or legend to view details**
 - User clicks on a specific listing or legend.
 - The system displays a detailed pop-up card on the right side of the screen with:
 - Images of the listing
 - Ad description
 - Ad type (e.g., House)
 - Ad availability (e.g., For Rent)
 - Ad price (hidden until user logs in)
 - Ad size
 - Two CTAs: "Add to Campaign" and "View Details"
 - Tooltip prompting user to log in/signup for price visibility
- **User clicks "Add to Campaign" on the pop-up card**
 - User clicks on "Add to Campaign" button.
 - The system adds the listing to the user's campaign cart and displays a confirmation message.
- **User clicks "View Details" on the pop-up card**
 - User clicks on "View Details" button.
 - The system opens a detailed screen showing:
 - Name of the listing
 - List of images
 - Segmented tabs: Photos, Audience, Unit Details
 - Audience tab with data: Demographics, Economic/Housing, Education/Miscellaneous

- Unit details including Size, Type, Screen Type, etc.
- Impressions: 4 Week Impression, Weekly Impression, CPM

14 - Geolocation Search

- **User searches by landmark or POI**
 - User enters a specific landmark or POI into the search bar.
 - The system displays relevant media spots around the specified landmark or POI on the map.
- **User searches by specific address**
 - User enters a specific address into the search bar.
 - The system finds and displays media spots near the entered address on the map.
- **User performs proximity search**
 - User specifies a central location and distance radius.
 - The system displays media spots within the specified radius around the central location.
- **User uses keyword search**
 - User enters keywords related to locations, demographics, or media types.
 - The system displays media spots matching the keywords on the map.

15 - Radius Targeting and Draw Tool

- **User sets a specific distance radius**
 - User defines a radius distance (e.g., 1 km, 5 km) from a central point.
 - The system displays media spots within the defined radius on the map.
- **User defines multiple radii for targeting**
 - User creates multiple radius circles for broader targeting.
 - The system shows overlapping radii and displays media spots within each defined radius.
- **User draws custom shapes on the map**
 - User uses the drawing tool to create custom shapes or boundaries.
 - The system displays media spots within the drawn shapes, highlighting results accordingly.

16 - Heatmap Overlay (Data Layer)

- **User views heatmap overlay for foot traffic**
 - User selects the heatmap overlay option.
 - The system displays areas with high foot traffic using a heatmap overlay.
- **User overlays demographic data**
 - User selects demographic data layers (e.g., age, gender, income levels).
 - The system overlays demographic data on the map, visualizing areas based on selected criteria.
- **User views time-based heatmaps**

- User selects specific times of day or days of the week.
- The system displays heatmaps reflecting foot traffic and demographic data for the chosen timeframes.
- **User views behavioral and road traffic data**
 - User selects behavioral data or road traffic data layers.
 - The system overlays behavioral and road traffic data on the map.

17 - Cluster Management

- **User groups media spots into clusters**
 - User selects clustering options to group media spots.
 - The system groups media spots into clusters for simplified planning.
- **User views aggregated performance data for clusters**
 - User clicks on a cluster.
 - The system displays aggregated performance data for the selected cluster.
- **User customizes clusters**
 - User applies customization criteria to clusters (e.g., media type, location).
 - The system adjusts clusters based on user-defined criteria.
- **User uses automated clustering**
 - User selects automated clustering options.
 - The system automatically groups media spots based on predefined criteria.

18 - Audience Insights (Data Layer)

- **User views demographic insights for selected areas**
 - User selects demographic insights data layer.
 - The system displays detailed demographic breakdowns for the selected areas.
- **User accesses data on consumer behaviors**
 - User selects behavioral insights data layer.
 - The system displays data on consumer behaviors and patterns for specific locations.
- **User segments audiences based on criteria**
 - User selects market segmentation options.
 - The system segments audiences based on criteria such as interests and purchasing power.
- **User views population density maps**
 - User selects population density data layer.
 - The system displays maps showing population density for targeted areas.

19 - Saved Map Criteria

- **User saves selected map criteria**
 - User saves selected map criteria, such as POI, radius, and other layers.
 - The saved criteria will be stored in the database.
- **User loads saved layers**

- User selects and applies saved map layers from a dropdown interface.

20 - Select Campaigns Dropdown

- **User adds listing to a campaign**
 - User clicks "Add to Campaign" from the unit card or unit detailed card.
 - The system adds the listing to the campaign cart.
 - When a user logs in or signs up, a default campaign named "Campaign 1" is created automatically.
 - Both logged-in users and regular users can save campaigns.
 - Users can select campaigns from a dropdown menu near the filter section.
 - When a user selects a specific campaign, they can perform map functions accordingly. Changing the campaign stores the previous campaign's selections and allows new filters or map criteria for the new campaign.
 - Users need to be signed in or logged in.
 - Campaigns are stored against the user's ID.

4- Campaign Builder

BRD#	FRD ID	Description	Images/Notes
Campaign Builder	4.1	● The system shall ensure that when a user clicks on the "Create Campaign" page, they are redirected to the Campaign Builder page. ● The system shall ensure that it is not mandatory for the user to be logged in to access the Campaign Builder page. ● The system shall ensure that the Campaign Builder page displays the same content and features whether the user is logged in or logged out. ● The system shall ensure that user is allowed to submit creative at any stage. ● The system shall ensure that advertiser can send proposal to media owner without creative too. ● Creative can be uploaded before or after the payment and confirmation.	 The image shows a screenshot of the 'Campaign Builder' interface. On the left, there is a sidebar with several options: 'This is Campaign', 'Request for Proposal', 'Add ad to this Campaign', 'Add a hypothetical search proposal', and 'Market Expansion Campaign'. The main area on the right displays a map with various colored overlays (red, yellow, green) representing different campaign areas or zones. The map is overlaid on a street grid and includes a river.

		The system shall ensure that when user upload proposal without creative he will be exposed with a pop warning that submitting without creative upload	
Campaign Builder Layout	4.2	- The system shall ensure that when the user clicks on the Campaign Builder, the screen is split in half: one half will contain a series of forms, and the other half will display an interactive map. - The system shall ensure that the user sees a list of options in the form section upon entering the Campaign Builder. The options shall include: - Plan a Campaign - Request for Proposal - Build an In-Store Impact Campaign - Build a Neighborhood Reach Campaign - Market Expansion Campaign - The system shall ensure that clicking on each option takes the user to a specific form related to that campaign type. Form interactions shall happen on the left side of the screen.	
Campaign Builder: Main Page	4.3	- The system shall ensure that when the user clicks on "Plan a Campaign," they are redirected to the Campaign Goals screen. - The system shall ensure that user have to select goals to proceed further - The system shall ensure that when user checked box the goals and click next button then he is exposed with campaign form accordingly. - The system shall ensure that when the user clicks on "Request for Proposal," they are redirected to a form to input campaign requirements and send an RFP.	The system shall ensure that when the user clicks on steps to proceed further in forms, they will open in the same interface.

		• The system shall ensure that when the user clicks on "Build an In-Store Impact Campaign," they are redirected to the In-Store Impact Campaign planner screen. • The system shall ensure that when the user clicks on "Build a Neighborhood Reach Campaign," they are redirected to the Neighborhood Hyperlocal Campaign planner screen. • The system shall ensure that when the user clicks on "Market Expansion Campaign," they are redirected to the Market Expansion Campaign planner screen.	
Full Campaign Planner	4.4	The system shall ensure that user is exposed with following fields on this form for selection: • Add Location on Map S(Search) • Add Location Manually on Map ○ Fields: ■ Search ■ Latitude ■ Longitude ○ Points Added Define Target Radius • Fields: ○ Drag Down ○ Enter Manually Campaign Length • Fields: ○ Campaign Duration ■ Options: 2, 4, 6 weeks ○ Start Date Budgets • Overall Campaign Budget ○ Input Type: Number input field • Cost Per Impressions	All the filters happening here in the form will be like the dashboard.

		○ Input Type: Fixed rate display ● Cost Per Acquisition ○ Input Type: Fixed rate display ● Cost Per Media/Media Type ○ Traditional OOH ■ Select from a range slider ○ Digital ■ Select from a range slider ○ In-store/Retail Advertising ■ Select from a range slider Markets ● Target Markets ○ Search for areas, List of cities, areas ● Selected Markets Audience and Demographics ● Target Audience ○ Gen Demographics ■ Age: Dropdown ■ Gender: Dropdown ■ Household Income: Dropdown ○ Property Data ■ Home Value by Area: Dropdown ○ Behavioral Audience Interests ■ Dropdown of activities ● Selected Audience ○ Age ○ Gender ○ Household Income Media Categories (Filters like dashboard) ● Traditional OOH Media Types ○ Checklist ● Digital Media Types ○ Checklist ● Instore / Retail Advertising ○ Checklist Retail/Venue Categories (In-Store Advertising) ● Target Venue Types

--	--	---	--

		• Create Campaign • The system shall ensure that when the user selects goals related to hyperlocal campaigns, they are redirected to the Neighborhood Hyperlocal Campaign Planner screen. • The system shall ensure that the user can add locations manually or select them on a map. • The system shall ensure that the user can define the target radius by dragging on the map. • The system shall ensure that the user can select the campaign length (2, 4, 6 weeks). • The system shall ensure that the user can input the overall campaign budget. • The system shall ensure that the user can set costs by media type with fixed cost ranges for Billboards, Digital Screens, and In-store Media Types. • The system shall ensure that media costs are auto-calculated based on media type selection. • The system shall ensure that the user can select media categories including Traditional OOH, Digital, and In-store/Retail Advertising. • The system shall ensure that the user can select retail/venue categories for in-store advertising. • The system shall ensure that the user can define footfall and transaction intensity for retail/venue locations. • The system shall ensure that the user can define metrics for success and select specific reporting and measurement needs.	
Interact ive Map and Filterin g	4.7	• The system shall ensure that on selecting each filter inside each campaign, the results interactively update on the map. • The system shall ensure that every time the user adds something to fields or selects from the form, the map displays interactive results. • The system shall ensure that when the user adds fields and the map shows interactive	All the filters happening here in the form will be like the dashboard.

		results, zooming out will display the units in the form of clusters. • The system shall ensure that when zooming into a specific cluster, it will further show locations related to the user's selection.	
GOALS	4.9	<i>The system shall ensure that If the user selects specific goals, the planning changes as follows:</i> 1. Increase Brand Awareness: ○ Targeting: Broader audience targeting to maximize reach. ○ Media Selection: Emphasis on high-visibility media types like billboards, digital screens, or high-traffic POS placements. ○ Creative Strategy: Use of memorable and visually impactful creatives to capture attention. ○ Metrics: Focus on impressions, reach, and brand recall. 2. Drive Website Traffic: ○ Targeting: Focus on users who are likely to be interested in the website's content or products. ○ Media Selection: Channels that allow for clickable ads or direct calls to action, such as digital screens with QR codes or links. ○ Creative Strategy: Include clear calls to action and incentives for clicking through. ○ Metrics: Click-through rate (CTR), website visits, and landing page performance. 3. Generate Leads: ○ Targeting: Focus on audience segments most likely to provide contact information or sign up for offers. ○ Media Selection: Platforms that support lead collection features, such	

		as digital ads with lead forms or QR codes leading to landing pages. ○ Creative Strategy: Offer valuable incentives and easy-to-complete forms. ○ Metrics: Number of leads, conversion rate, and cost per lead (CPL). 4. Boost Sales: ○ Targeting: Audience segments likely to make purchases, possibly based on previous buying behavior or demographics. ○ Media Selection: High-impact media types that drive immediate action, such as in-store ads, special offers, or promotions. ○ Creative Strategy: Focus on persuasive messaging, special offers, and product benefits. ○ Metrics: Sales volume, revenue, return on ad spend (ROAS). 5. Promote a Product or Service: ○ Targeting: Specific audience segments interested in the product or service. ○ Media Selection: Channels that can effectively showcase the product, such as in-store displays, digital screens with product demos, or POS ads. ○ Creative Strategy: Highlight key features and benefits of the product or service. ○ Metrics: Product inquiries, sales directly related to the promotion, and promotional code usage. 6. Enhance Customer Engagement: ○ Targeting: Audience segments with a history of interacting with the brand or those likely to engage. ○ Media Selection: Platforms conducive to interactions, such as social media screens or interactive POS displays. ○ Creative Strategy: Engage users with interactive elements, contests, or calls for feedback.	
--	--	--	--

		○ Metrics: Engagement rate, social media interactions, and user-generated content. 7. Increase In-Store Traffic: ○ Targeting: Local audience within close proximity to the store. ○ Media Selection: Geographically targeted media such as local billboards or POS ads. ○ Creative Strategy: Highlight store-specific offers, promotions, or events. ○ Metrics: Store visits, foot traffic counts, and redemption rates for in-store promotions. 8. Build a Community: ○ Targeting: Audience segments interested in building a community or brand advocacy. ○ Media Selection: Channels that facilitate community engagement, such as social media platforms or interactive in-store displays. ○ Creative Strategy: Encourage community participation, user-generated content, and interactions. ○ Metrics: Community growth, engagement metrics, and user-generated content. 9. Improve Customer Retention: ○ Targeting: Existing customers or those with a history of repeat purchases. ○ Media Selection: Channels that reach current customers, such as loyalty programs or targeted email campaigns. ○ Creative Strategy: Focus on loyalty offers, rewards, and exclusive promotions. ○ Metrics: Repeat purchase rate, customer lifetime value (CLV), and retention rate. 10. Test and Learn:	
--	--	--	--

		○ Targeting: <i>Varies based on test parameters; could be broad or specific.</i> ○ Media Selection: <i>A mix of media types to test effectiveness.</i> ○ Creative Strategy: <i>Experiment with different creative approaches and strategies.</i> ○ Metrics: <i>A/B test results, performance data, and insights for optimization.</i> 11. Raise Awareness for a Cause: ○ Targeting: <i>Audience segments likely to support or be interested in the cause.</i> ○ Media Selection: <i>Channels that highlight social impact, such as community boards or local media.</i> ○ Creative Strategy: <i>Emphasize the cause's impact and call for action.</i> ○ Metrics: <i>Awareness levels, actions taken, and social media mentions.</i> 12. Expand Market Reach: ○ Targeting: <i>New geographic or demographic segments.</i> ○ Media Selection: <i>Channels that reach new markets, such as regional billboards or local media.</i> ○ Creative Strategy: <i>Adapt messaging to new markets and segments.</i> ○ Metrics: <i>Market penetration, new customer acquisition, and geographic reach.</i> 13. Drive App Installs: ○ Targeting: <i>Users likely to download and use the app.</i> ○ Media Selection: <i>Channels with clickable ads or direct app promotions.</i> ○ Creative Strategy: <i>Focus on app features, benefits, and incentives for downloading.</i> ○ Metrics: <i>Number of app installs, cost per install (CPI), and app engagement.</i> 14. Promote an Event: ○ Targeting: <i>Audience segments likely to attend the event.</i>	
--	--	--	--

		○ Media Selection: Channels that can effectively promote events, such as local billboards or digital screens. ○ Creative Strategy: Highlight event details, benefits of attending, and registration incentives. ○ Metrics: Event registrations, ticket sales, and event attendance.	
RFP AND Create Campaign Button	4.8	For Templates except In - store Summary Page: The system shall ensure that on every campaign form the user proceeds with, the user will be able to see the buttons to request a proposal and create a campaign. REQUEST FOR PROPOSAL BUTT ● The system shall ensure that on clicking "Request for Proposal," the user can send out ON:their RFP to receive customized offers from OOHUP and media owners, featuring exact options, real prices, and availability tailored to their needs. ○ The system shall ensure that when the user clicks on the RFP button, an automatic proposal is created in the form of a PDF and is sent to the media owner. ○ The system shall ensure that the user is prompted with login/sign-up modals so the user can log in or sign up. ○ The system shall ensure that if the user is not logged in or signed up, on clicking the respective buttons (login/sign up), they will be forced to do so accordingly. ○ Once the user is signed up or logged in, the automatically created proposal will be sent to the media owner with their user ID.	● The system shall ensure that media owners receives the populated data correctly in proposal.

		• The system shall ensure that feedback from media owners is shown in the Requests section. ○ The system shall ensure that the user will be able to see the proposal feedback accordingly in the Requests section. CREATE CAMPAIGN BUTTON: • The system shall ensure that on clicking the "Create Campaign" button, the user will be redirected to the suggestions page where the user will be able to see a list of suggestions based on their selections, showing units related to their criteria. • The system shall ensure that when the user clicks on the campaign create page, they are redirected to the summary page (creatives page) where they will be able to see the list of results based on the previously selected templates. • The system shall ensure that the user is not forced or required to log in or sign up to see the campaign summary page.	
VIEW ALL CAMPAIGNS(Summary Page)	4.9	• The system shall ensure that when users fill out the forms and click on the "Create Campaign" button, they will be redirected to the campaign summary page. • The campaign summary page is a list of the results that are fetched from databases based on the selections of the users by selecting templates and filling the criteria. • The system shall ensure that users are shown the correct results on the summary detail page. • The system shall ensure that when user selects the both In store and traditional campaigns he will be able to see all type of campaign on the campaign summary page.	

		Campaign Summary Page: • The system shall ensure that when the user is on the Campaign Summary Page, they will be able to see the following fields and details. On the right side, they will be able to see the map of the shown listings in the form of clusters. Campaign Information: ○ Campaign Name + ID ○ Campaign Start Date ○ Campaign End Date ○ Creation Date ○ Campaign Type ○ Advertiser Details • Target Markets: ○ List of cities/regions (e.g., Dubai, Sharjah) ○ Specific locations within the markets (e.g., Motor City, Marina, Al Zahiyah) • Target Audience: ○ Demographic information (e.g., 20-Year-Old Males) ○ Average Rent ○ Interests (e.g., Gym Goers) • Key Demographics: ○ Displayed for selected markets (e.g., Dubai, Sharjah) • Campaign on Map: ○ Visual map showing campaign locations with markers • Media Cart: ○ List of selected media units with details: ■ Media ID ■ Location (City, Country) ■ Availability dates ■ Ad price ■ Transit number ■ Size ■ Option to download design spec file ■ Option to upload designs • Buttons: ○ Edit Selections	
--	--	--	--

		○ Submit Campaign ● The system shall ensure that the user is able to edit, add, and delete campaign selections. ● The system shall ensure that when the user clicks on "Add," they will be redirected to the dashboard main page from where they can again select the listings by applying filters. ● The system shall ensure that when the user clicks on "Edit," they will be able to modify the campaign selections. ● The system shall ensure that when the user clicks on "Delete," they will be able to delete a listing. ● The system shall ensure that the user will be able to change the campaign name by clicking on the edit icon in front of the campaign name. Download Design Spec File: ● The system shall ensure that in the media cart, the user will be able to see the "Download Design Spec" button from where they will be able to download the template of the design file needed to upload for specific listings. ● The system shall ensure that the user is able to download the design file correctly in the form of a PDF or Excel file. Use Cases - Campaign Builder FRD

1. Accessing Campaign Builder

User clicks on the "Create Campaign" page.

- The system redirects the user to the Campaign Builder page.

User accesses the Campaign Builder page without logging in.

- The system ensures that it is not mandatory for the user to be logged in to access the Campaign Builder page.

User views content and features on the Campaign Builder page.

- The system displays the same content and features whether the user is logged in or logged out.

2. Campaign Builder Layout

User clicks on the Campaign Builder.

- The system splits the screen: one half contains a series of forms, the other half displays an interactive map.

User sees a list of options in the form section upon entering the Campaign Builder.

- Options include: Plan a Campaign, Request for Proposal, Build an In-Store Impact Campaign, Build a Neighborhood Reach Campaign, Market Expansion Campaign.

User clicks on each option in the Campaign Builder.

- The system ensures that clicking on each option takes the user to a specific form related to that campaign type. Form interactions happen on the left side of the screen.

3. Campaign Builder: Main Page

User clicks on "Plan a Campaign."

- The system redirects the user to the Campaign Goals screen.

User selects campaign goals.

- The system ensures that user have to select goals to proceed further.

User clicks the next button after selecting goals.

- The system redirects the user to the relevant campaign form based on selected goals.

User clicks on "Request for Proposal."

- The system redirects the user to a form to input campaign requirements and send an RFP.

User clicks on "Build an In-Store Impact Campaign."

- The system redirects the user to the In-Store Impact Campaign planner screen.

User clicks on "Build a Neighborhood Reach Campaign."

- The system redirects the user to the Neighborhood Hyperlocal Campaign planner screen.

User clicks on "Market Expansion Campaign."

- The system redirects the user to the Market Expansion Campaign planner screen.

4. Full Campaign Planner

User selects goals related to a comprehensive campaign.

- The system redirects the user to the Full Campaign Planner screen.

User is exposed to the following fields for selection:

- Add Location on Map (Search)
- Add Location Manually on Map (Fields: Search, Latitude, Longitude, Points Added)
- Define Target Radius (Fields: Drag Down, Enter Manually)
- Campaign Length (Fields: Campaign Duration, Options: 2, 4, 6 weeks, Start Date)
- Budgets (Overall Campaign Budget, Cost Per Impressions, Cost Per Acquisition, Cost Per Media/Media Type)
- Markets (Target Markets, Selected Markets)
- Audience and Demographics (Target Audience, Gen Demographics, Property Data, Behavioral Audience Interests, Selected Audience)
- Media Categories (Traditional OOH Media Types, Digital Media Types, Instore / Retail Advertising)
- Retail/Venue Categories (Target Venue Types, Selected Venue Types)
- Reporting and Measurements Needed (Measurements 1, 2, 3)
- Buttons (Request for Proposal, Create Campaign)

User sets costs by media type with fixed cost ranges.

- The system ensures that media costs are auto-calculated based on media type selection.

- The system displays CPM and CPA rates as fixed values based on predefined rates.

User selects target markets from a list.

- The system ensures that user can select target markets from a list.

User defines audience demographics by selecting age, gender, household income, interests, and behavioral characteristics.

- The system ensures that user can define audience demographics.

User selects media categories including Traditional OOH, Digital, and In-store/Retail Advertising.

- The system ensures that user can select media categories.

User selects retail/venue categories for in-store advertising.

- The system ensures that user can select retail/venue categories.

User defines metrics for success and selects specific reporting and measurement needs.

- The system ensures that user can define metrics for success and select specific reporting and measurement needs.

5. In-Store Advertising Planner

User selects goals related to in-store advertising.

- The system redirects the user to the In-Store Advertising Planner screen.

User is exposed to the following fields for selection:

- Campaign Length (Options: 2, 4, 6 weeks, Start Date)
- Budgets (Overall Campaign Budget, Cost Per Media/Media Type, Cost Per Impressions, Cost Per Acquisition)
- Markets (Target Markets, Selected Markets)
- Audience and Demographics (Target Audience, Gen Demographics, Property Data, Behavioral Audience Interests, Selected Audience)
- Retail/Venue Categories (Target Venue Types, Selected Venue Types)
- Retail/Venue Footfall and Transaction Intensity (Target Profile: High, Medium, Low, Selected Intensity)
- Instore Media Units (Checklist of all fields, Selected Media Type, Instore media location types within venue, Selected Instore Media Location)
- Reporting and Measurements Needed (Measurements 1, 2, 3)
- Buttons (Create Campaign)

User sets costs by media type with fixed cost ranges.

- The system ensures that media costs are auto-calculated based on media type selection.

User selects target markets.

- The system ensures that user can select target markets.

User defines audience demographics by selecting age, gender, household income, interests, and behavioral characteristics.

- The system ensures that user can define audience demographics.

User selects retail/venue categories for in-store advertising.

- The system ensures that user can select retail/venue categories.

User defines footfall and transaction intensity for retail/venue locations.

- The system ensures that user can define footfall and transaction intensity.

User selects in-store media units and their locations within venues.

- The system ensures that user can select in-store media units and their locations within venues.

User defines metrics for success and selects specific reporting and measurement needs.

- The system ensures that user can define metrics for success and select specific reporting and measurement needs.

6. Neighborhood Hyperlocal Campaign Planner

User selects goals related to hyperlocal campaigns.

- The system redirects the user to the Neighborhood Hyperlocal Campaign Planner screen.

User is exposed to the following fields for selection:

- Add Location on Map
- Add Location Manually on Map (Fields: Search, Latitude, Longitude, Points Added)
- Define Target Radius (Fields: Drag Down, Enter Manually)
- Campaign Length (Options: 2, 4, 6 weeks, Start Date)
- Budgets (Overall Campaign Budget, Cost Per Impressions, Cost Per Acquisition, Cost Per Media/Media Type)

- Media Categories (Traditional OOH Media Types, Digital Media Types, Instore / Retail Advertising)
- Retail/Venue Categories (Target Venue Types, Selected Venue Types)
- Retail/Venue Footfall and Transaction Intensity (Target Profile: High, Medium, Low, Selected Intensity)
- Reporting and Measurements Needed (Measurements 1, 2, 3)
- Buttons (Request for Proposal, Create Campaign)

User sets costs by media type with fixed cost ranges.

- The system ensures that media costs are auto-calculated based on media type selection.

User selects media categories including Traditional OOH, Digital, and In-store/Retail Advertising.

- The system ensures that user can select media categories.

User selects retail/venue categories for in-store advertising.

- The system ensures that user can select retail/venue categories.

User defines footfall and transaction intensity for retail/venue locations.

- The system ensures that user can define footfall and transaction intensity.

User defines metrics for success and selects specific reporting and measurement needs.

- The system ensures that user can define metrics for success and select specific reporting and measurement needs.

7. Interactive Map and Filtering

User selects filters inside each campaign.

- The system ensures that on selecting each filter inside each campaign, the results interactively update on the map.

User adds something to fields or selects from the form.

- The system ensures that every time the user adds something to fields or selects from the form, the map displays interactive results.

User zooms out on the map.

- The system ensures that when the user adds fields and the map shows interactive results, zooming out will display the units in the form of clusters.

User zooms into a specific cluster.

- The system ensures that when zooming into a specific cluster, it will further show locations related to the user's selection.

8. RFP and Create Campaign Button

User proceeds with a campaign form.

- The system ensures that on every campaign form the user proceeds with, the user will be able to see the buttons to request a proposal and create a campaign.

User clicks on "Request for Proposal."

- The system ensures that on clicking "Request for Proposal," the user can send out their RFP to receive customized offers from OOHUP and media owners, featuring exact options, real prices, and availability tailored to their needs.
- The system ensures that when the user clicks on the RFP button, an automatic proposal is created in the form of a PDF and is sent to the media owner.
- The system ensures that the user is prompted with login/sign-up modals so the user can log in or sign up.
- The system ensures that if the user is not logged in or signed up, on clicking the respective buttons (login/sign up), they will be forced to do so accordingly.
- Once the user is signed up or logged in, the automatically created proposal will be sent to the media owner with their user ID.
- The system ensures that feedback from media owners is shown in the Requests section.
- The system ensures that the user will be able to see the proposal feedback accordingly in the Requests section.

User clicks on "Create Campaign."

- The system ensures that on clicking the "Create Campaign" button, the user will be redirected to the suggestions page where the user will be able to see a list of suggestions based on their selections, showing units related to their criteria.
- The system ensures that when the user clicks on the campaign create page, they are redirected to the summary page (creatives page) where they will be able to see the list of results based on the previously selected templates.
- The system ensures that the user is not forced or required to log in or sign up to see the campaign summary page.

9. Campaign Summary Page

User fills out the forms and clicks on the "Create Campaign" button.

- The system ensures that when users fill out the forms and click on the "Create Campaign" button, they are redirected to the campaign summary page.

- The campaign summary page is a list of the results that are fetched from databases based on the selections of the users by selecting templates and filling the criteria.
- The system ensures that users are shown the correct results on the summary detail page.

User views the campaign summary page.

- **Campaign Information:**
 - The system ensures that when the user is on the Campaign Summary Page, they will be able to see the following fields and details. On the right side, they will be able to see the map of the shown listings in the form of clusters.
 - Campaign Name + ID
 - Campaign Start Date
 - Campaign End Date
 - Creation Date
 - Campaign Type
 - Advertiser Details

User views target markets.

- Target Markets: List of cities/regions (e.g., Dubai, Sharjah), Specific locations within the markets (e.g., Motor City, Marina, Al Zahiyah)

User views target audience.

- Target Audience: Demographic information (e.g., 20-Year-Old Males), Average Rent, Interests (e.g., Gym Goers)

User views key demographics.

- Key Demographics: Displayed for selected markets (e.g., Dubai, Sharjah)

User views campaign on map.

- Campaign on Map: Visual map showing campaign locations with markers

User views media cart.

- Media Cart: List of selected media units with details:
 - Media ID
 - Location (City, Country)
 - Availability dates
 - Ad price
 - Transit number
 - Size
 - Option to download design spec file

- Option to upload designs

User clicks on buttons:

- Buttons:
 - Edit Selections
 - Submit Campaign

User edits, adds, and deletes campaign selections.

- The system ensures that the user is able to edit, add, and delete campaign selections.
- The system ensures that when the user clicks on "Add," they will be redirected to the dashboard main page from where they can again select the listings by applying filters.
- The system ensures that when the user clicks on "Edit," they will be able to modify the campaign selections.
- The system ensures that when the user clicks on "Delete," they will be able to delete a listing.
- The system ensures that the user will be able to change the campaign name by clicking on the edit icon in front of the campaign name.

User downloads design spec file.

- The system ensures that in the media cart, the user will be able to see the "Download Design Spec" button from where they will be able to download the template of the design file needed to upload for specific listings.
- The system ensures that the user is able to download the design file correctly in the form of a PDF or Excel file.

User uploads design creatives.

- The system ensures that the user is able to upload design creatives respectively.
- The system ensures that the user is able to upload design creatives accurately.
- The system ensures that when the user uploads the design creative, it is stored against that media item.
- The system ensures that on uploading the wrong format, the system will give an error.

User submits the campaign.

- The system ensures that at the end of the campaign summary page, there is a button to "Submit Campaign."
- The system ensures that on clicking "Submit Campaign," it will be sent to media owners in the form of a proposal.
- The system ensures that the proposal is created automatically upon clicking "Submit Campaign."
- The system ensures that when the media owner approves the listing request, it will be shown in the Requests section.

User proceeds to checkout for in-store campaigns.

- The system ensures that when users fill out the in-store campaign forms and click on the "Create Campaign" button, they will be redirected to the campaign summary page.
- The system ensures that users are shown the correct results on the summary detail page.
- **In-Store Campaign Summary Page:**
 - The system ensures that when the user is on the Campaign Summary Page, they will be able to see the following fields and details. On the right side, they will be able to see the map of the shown listings in the form of clusters.
 - In-Store Campaign Name + ID
 - Campaign Start Date
 - Campaign End Date
 - Creation Date
 - Campaign Type
 - Advertiser Details

User views target markets for in-store campaigns.

- Target Markets: List of cities/regions (e.g., Dubai, Sharjah), Specific locations within the markets (e.g., Motor City, Marina, Al Zahiyah)

User views target audience for in-store campaigns.

- Target Audience: Demographic information (e.g., 20-Year-Old Males), Average Rent, Interests (e.g., Gym Goers)

User views selected retail venues for in-store campaigns.

- Selected Retail Venues: List of selected retail venues categorized by type (e.g., Gyms, Supplement Shops), Specific venues listed under each category

User views selected media units for in-store campaigns.

Use Cases - Checkout FRD

1- Viewing Proposal Status in the Requests Section

User navigates to the Requests section:

1. User navigates to the Requests section.
2. The system displays the status of the sent proposal.

User receives notification for approved request:

1. The user's request is approved.
2. The system sends a notification to the user.

User clicks on the approved request:

1. User clicks on the approved request notification.
2. The system redirects the user to the checkout flow.

2 - Viewing Campaign Details and Invoicing on the Checkout Page

User navigates to the checkout page:

1. User navigates to the checkout page.
2. The system displays the campaign details and invoicing information.

User reviews campaign details:

1. User views the following details for each media unit:
 - Media ID
 - Location (City, Country)
 - Availability dates
 - Ad price
 - Transit number
 - Size
 - Option to download design spec file
 - Option to upload designs

User clicks "Proceed to Payment":

1. User clicks the "Proceed to Payment" button.
2. The system displays available payment methods.

3 - Confirming Order After Payment

User completes the payment:

1. User selects a payment method.
2. User completes the payment process.

System confirms the order:

1. The system confirms the order.
2. The system notifies the user that the order is confirmed.
3. The system updates the media owner with the order confirmation.

4 - In-Store Media Campaigns Checkout Flow

User selects the in-store template and fills the form:

1. User selects the in-store template.
2. User fills the form accordingly.
3. The system displays only one button at the end of the form: "Create Campaign."

User clicks "Create Campaign":

1. User clicks the "Create Campaign" button.
2. The system redirects the user to the summary page.

User views in-store-related campaigns on the summary page:

1. The user views all in-store-related campaigns based on their selection.
2. The user can add, edit, or delete in-store listings.

User uploads creatives on the summary page:

1. User uploads creatives on the summary page.
2. The system displays a "Checkout" button.

User clicks "Checkout":

1. User clicks the "Checkout" button.
2. The system redirects the user to the checkout page.

User reviews campaign details on the checkout page:

1. User views the following details for each media unit:
 - Media ID
 - Location (City, Country)
 - Availability dates
 - Ad price
 - Transit number
 - Size
 - Option to download design spec file
 - Option to upload designs

User proceeds to payment:

1. User reviews the campaign details and billing information.
2. User completes the payment process.

System confirms the order:

1. The system sends a payment confirmation and order confirmation modal to the user.
2. The system creates an invoice automatically and displays it on the checkout detail page.
3. The system sends the order details to the OOHUP admin and retailers.
4. The system ensures all information is fetched correctly to the retailers and OOHUP admin.
5. The system ensures that all orders related to in-store campaigns are managed internally by OOHUP while keeping the retailers in the loop.

6 - Requests

BRD#	FRD ID	Description	Images/Notes
Approval Requests	6.1	● The system shall ensure that only logged-in or signed-up users are able to access the Requests feature. ● The system shall ensure that when a regular user clicks on the "Requests" menu, they are redirected to the Requests page.	The system shall ensure that changes needed feedback from media owner is shown to advertiser correctly. User must be logged In/Signed Up.

		• The system shall ensure that when the user is on the Requests page, they will be able to see the list of approved requests. • The system shall ensure that Any requests and updates happening will also be pushed through Email Notifications to the user.	
	6.2	• The system shall ensure that the user is able to clearly identify which requests are approved or need changes based on indications. • The system shall ensure that when the user is on the Requests page, they will be able to see the following details for each request: ○ ID ○ Media owner name ○ Campaign ID ○ Production name ○ Status • The system shall ensure that when the user clicks on an approved request, they are redirected to the checkout flow.	
	6.3	• The system shall ensure that if any request needs changes, the user is properly able to see the details of what changes are needed and why the request is not approved.	
	6.4	• The system shall ensure that when the media owner has approved the campaign request, the user will be able to see it in the Requests section.	

Use Cases - Requests FRD

1. Accessing the Requests Feature

User accesses the Requests feature:

- User logs in or signs up to access the Requests feature.

- User clicks on the "Requests" menu.
- The system redirects the user to the Requests page.

User views approved requests:

- User navigates to the Requests page.
- The system displays a list of approved requests.

User views feedback from media owners:

- The system displays feedback from media owners for changes needed.
- User sees the feedback correctly displayed.

2. Identifying Request Status

User identifies request status:

- User navigates to the Requests page.
- The system clearly indicates which requests are approved and which need changes.

User views request details:

- User views the following details for each request:
 - ID
 - Media owner name
 - Campaign ID
 - Production name
 - Status

User clicks on an approved request:

- User clicks on an approved request.
- The system redirects the user to the checkout flow.

3. Viewing Change Requests

User views change requests:

- User navigates to the Requests page.
- The system displays details of what changes are needed and why the request is not approved.

4. Viewing Approved Campaign Requests

User views approved campaign requests:

- Media owner approves the campaign request.

- The system updates the Requests section to show the approved request.
- User navigates to the Requests page and sees the approved campaign request.

7 - Orders and Production

BRD#	FRD ID	Description	Images/Notes
Production	7.1	The system shall ensure that after an order is placed, the user will be able to see who is managing the order and how the production is being managed.	
	7.2	• The system shall ensure that when the user clicks on "Orders" from the navigation bar, they will be redirected to a page where they can see the list of all their orders. • The system shall ensure that user will be able to use filter to see completed and on going orders.	
Production Management	7.3	• The system shall ensure that if the user clicks on any ongoing order, they will be able to see the progress of the order in a progress tracker form. • The system shall ensure that the user is able to see the details of the progress of each order on the order detail page. • The system shall ensure that the user will be able to see the media owner and production owner for each order. • The system shall ensure that the user will be able to track the progress of the order. • The system shall ensure that the user will be able to see who is managing production and the status in the progress tracker.	The system shall fetch progress based on each phase completed by production house and media owner.

		• The system shall ensure that users receive notifications for significant updates or changes in the status of their orders. • Email Notifications to be sent to users on major progress/status (initiation of production, go live etc)	
	7.4	The system shall ensure that the user is able to see all completed orders and ongoing orders correctly.	
	7.5	The system shall ensure that the progress tracker shows the complete details and phases the order is passing through.	
Order Details and History	7.6	• The system shall ensure that the user will be able to use filters to see both completed and ongoing orders. • The system shall ensure that the user will be able to see both ongoing and completed orders. • The system shall ensure that when the user clicks on each completed or ongoing order, they will be able to see the history, including timestamps and all other related details. • The system shall ensure that users can download a detailed report of their order history, including all timestamps, status updates, and relevant details. • The system shall ensure that users can contact the support team directly from the order detail page if they have any queries or issues regarding their order.	

Use Cases - Orders and Production

1. Viewing Order Management

- User places an order.
- The system shows the user who is managing the order and details on how the production is being managed.

2. Viewing All Orders

- User clicks on "Orders" from the navigation bar.
- The system redirects the user to a page listing all their orders.
- The system allows the user to use filters to see completed and ongoing orders.

3. Tracking Order Progress

- User clicks on an ongoing order.
- The system displays the progress of the order in a progress tracker form.
- The system shows details of the progress for each order on the order detail page.
- The system shows the media owner and production owner for each order.
- The system allows the user to track the progress of the order.
- The system shows who is managing production and the status in the progress tracker.
- The system notifies users of significant updates or changes in order status.

4. Viewing Completed and Ongoing Orders

- The system displays all completed and ongoing orders correctly.
- The system shows the progress tracker with complete details and phases the order is passing through.

5. Viewing Order Details and History

- User uses filters to see both completed and ongoing orders.
- The system shows both ongoing and completed orders.
- User clicks on a completed or ongoing order.
- The system displays the history of the order, including timestamps and all related details.
- The system allows users to download a detailed report of their order history, including all timestamps, status updates, and relevant details.
- The system allows users to contact the support team directly from the order detail page for any queries or issues regarding their order.

6. Viewing Vendor Profiles

- User clicks on a vendor name from the order history.
- The system shows the vendor profile.
- The system shows how many orders have been completed with this vendor.
- The system displays the complete details of the vendors.

9 - Saved

BRD#	FRD ID	Description	Images/Notes
------	--------	-------------	--------------

Saved Campaign		• The system shall ensure that both logged-in users and regular users can save campaigns. • The system shall provide a dropdown menu on the dashboard near the filter section for users to select saved campaigns. • The system shall ensure that when a user selects a specific campaign from the dropdown menu, they can perform map functions such as applying filters, searching locations, and interacting with map data accordingly. • The system shall ensure that when a user changes the campaign selection from the dropdown, the previous campaign's selections and settings are stored securely. • The system shall ensure that upon selecting a new campaign, users can apply new filters or map criteria without affecting the previously saved campaigns. • The system shall ensure that campaign settings and selections are automatically saved and loaded correctly to ensure continuity and consistency in user experience. • The system shall ensure that any modifications to a saved campaign are updated and saved immediately to prevent data loss. • The system shall provide an intuitive and user-friendly interface for managing saved campaigns to enhance usability and efficiency.	Refer to the SAVED functionality mentioned in the dashboard. FRD : 3.13
-----------------------	--	--	--

Use Cases - Saved Campaigns

Saving Campaigns

1. **User saves a campaign.**
 - The system ensures that both logged-in users and regular users can save campaigns.

Selecting Saved Campaigns

2. **User selects a saved campaign from the dropdown menu on the dashboard near the filter section.**

- The system provides a dropdown menu for users to select saved campaigns.
- The system allows the user to perform map functions such as applying filters, searching locations, and interacting with map data accordingly.

Switching Between Campaigns

3. User changes the campaign selection from the dropdown menu.

- The system securely stores the previous campaign's selections and settings.
- The system allows the user to apply new filters or map criteria for the new campaign without affecting the previously saved campaigns.

Automatic Saving and Loading

4. User modifies a saved campaign.

- The system automatically saves and loads campaign settings and selections to ensure continuity and consistency in user experience.
- The system updates and saves any modifications to a saved campaign immediately to prevent data loss.

Managing Saved Campaigns

5. User interacts with the interface for managing saved campaigns.

- The system provides an intuitive and user-friendly interface to enhance usability and efficiency in managing saved campaigns.

10 - Profiles

BRD#	FRD ID	Description	Images/Notes
Profile	10.1	• The system shall ensure that users can access the Profile Management section from the navigation bar by clicking on their account name or profile icon. • The system shall ensure that the Profile Management section allows users to view and edit their personal details, including: First Name, Last Name, Email Address, Phone	

		Number, Company details and Position in Company.	
	10.2	The system shall ensure that users can upload or change their profile picture.	
Update Password	10.3	The system shall ensure that users can update their password. The password update process shall include: Current Password, New Password, Confirm New Password.	The system shall ensure that users receive an error message if the current password entered is incorrect or if the new passwords do not match.
	10.4	The system shall ensure that users can manage their notification preferences, On/Off.	
	10.5	- The system shall ensure that users can update their billing information, including: Billing Address, Payment Methods (Credit Card, PayPal, etc.). - The system shall ensure that users can deactivate their account. The deactivation process shall include: Confirmation Prompt, Reason for Deactivation (optional).	

Use Cases - Profile Management

Accessing Profile Management

- User clicks on their account name or profile icon from the navigation bar.**
 - The system redirects the user to the Profile Management section.
 - The system allows the user to view and edit their personal details, including First Name, Last Name, Email Address, and Phone Number.

Uploading or Changing Profile Picture

- User uploads or changes their profile picture.**
 - The system allows the user to upload a new profile picture or change the existing one.

- The system updates and displays the new profile picture on the user's profile.

Updating Password

3. User updates their password.

- The system provides fields for Current Password, New Password, and Confirm New Password.
- The system ensures that the user receives an error message if the current password entered is incorrect or if the new passwords do not match.
- The system updates the password if all entered information is correct.

Managing Notification Preferences

4. User manages their notification preferences.

- The system provides options for the user to turn notifications On or Off.
- The system saves the user's notification preferences accordingly.

Updating Billing Information

5. User updates their billing information.

- The system provides fields for Billing Address and Payment Methods (Credit Card, PayPal, etc.).
- The system saves the updated billing information and ensures it is used for future transactions.

Deactivating Account

6. User deactivates their account.

- The system prompts the user for confirmation before deactivation.
- The system provides an optional field for the user to enter a reason for deactivation.
- The system deactivates the account after confirmation and logs the reason for deactivation if provided.

11- Notifications:

BRD#	FRD ID	Description	Images/Notes
------	--------	-------------	--------------

Notifications	11.1	The system shall ensure that the user will be able to receive notifications directly on the dashboard. Notifications will be displayed in real-time, allowing the user to stay updated on all relevant activities and events.	
	11.2	The system shall ensure that the user will be able to see all notifications in real-time as they occur. This feature ensures that the user is always aware of any immediate actions or updates required.	
	11.3	The system shall ensure that when the user clicks on any notification from the notification tab, they will be redirected to the corresponding screen or section related to that notification. This interaction will allow the user to quickly address or review the content of the notification.	
	11.4	The system shall ensure that all notifications related to user activity on the platform, including any requests or updates, will also be sent to the user via email.	The system shall ensure that email alerts are real time.

Use Cases - Notifications

Receiving Notifications on the Dashboard

- **User receives notifications on the dashboard.**
 - The system displays notifications in real-time on the user's dashboard.
 - The user sees a notification alert on the dashboard when a new notification is received.
 - The system ensures that the notification is prominently displayed, keeping the user informed of relevant activities and events.

Viewing Notifications in Real-Time

- **User views notifications as they occur in real-time.**
 - The system pushes notifications to the user's dashboard as soon as they occur.
 - The user can see all notifications instantly without any delay.
 - The system ensures that the user is always aware of any immediate actions or updates required.

Interacting with Notifications

- **User clicks on a notification from the notification tab.**
 - The system redirects the user to the corresponding screen or section related to that notification.
 - The user is exposed to the relevant content or action associated with the notification.
 - The system allows the user to quickly address or review the notification details by taking them directly to the appropriate page.

Receiving Email Notifications

- **User receives email notifications related to their platform activity.**
 - The system sends notifications related to the user's activity via email in addition to the dashboard notifications.
 - The user receives real-time email alerts for all notifications, including requests or updates.
 - The system ensures that the user remains informed even when not actively using the platform by providing timely email updates.

12- Campaign and Analytics:

BRD#	FRD ID	Description	Images/Notes
Campaign and Analytics	12.1	The system shall ensure that when the user clicks on the "Reporting and Analytics" button from the navigation bar, they will be redirected to the "Campaign and Analytics" screen.	
	12.2	The system shall ensure that only logged-in users will be able to access this screen. For non-logged-in users, the system shall ensure that the button is either disabled or prompts them to log in.	
	12.3	The system shall ensure that when user is on this screen they need to first select the ad type: The system shall ensure that when the user is on the	

		"Campaign and Analytics" screen, they will be able to see the following sections: 1. Setup Measurement Variables for Specific Reports: ○ The system shall ensure that the user will be able to select the following options in this section: ■ Ad Type to Measure For: ■ Direct Call to Action (SMS, QR Code, Web links) ■ Discounts, Coupons & Vouchers (POS & Print - Redemption Rate) ■ Attribution & Lift on Site/Digital Ads: ■ Website Links ■ QR Code Links ■ Other Call To Action Links (pixels for tracking traffic) ■ Link Digital Ad Accounts: ■ Google Ads ■ Instagram Ads ■ Provide OOHUP Access to Analytics Tools: ■ Permission to access the advertiser's web analytics tools (Google Analytics, Adobe Analytics) to track traffic and conversions from the geo-fenced area. ■ Ad Platform Access: ■ Access to data from ad platforms used for digital campaigns (Facebook Ads Manager, Google Ads). ■ Setup UTM Parameters: ■ Integrate tracking from specific areas	
--	--	--	--

		(geofenced to ad location). ■ Add UTM parameters to URLs and set up tracking in the advertiser's web analytics. ■ Ensure QR codes and short URLs are correctly configured to capture engagement data from POS slips or print media. The system shall ensure that the user has filled in all the required information in this section.	
	12.4	The system shall ensure that the analytics fetched from google analytics, instagram ad , facebook all need to be fetched accordingly basis on the links of the social accounts.	
	12.5	● The system shall also ensure that the user is able to link social media accounts and fetch all related analytics from those social media platforms to the OOHUP platform. ● The system shall ensure that all the analytics fetched from social media are displayed in an organized manner.	
Campaign Analytics Display Requirements	12.6	The system shall ensure that analytics results will be shown on this screen when the campaign is completed. 1. Campaign Header Information: ○ The system shall display the campaign title, location, and dates (Start Date, End Date, and Creation Date). ○ The system shall include the campaign type (e.g., Traditional and In-store). ○ There shall be an option to "Download Report," which allows the user to	These requirements ensure that all relevant campaign analytics data are comprehensively displayed to the user once the campaign has concluded, providing actionable insights and detailed metrics for evaluation.

		download a complete analytics report for the campaign. ■ The system shall ensure that user is able to download the report in pdf format. 2. Coverage Section: ○ Estimated Reach: The system shall display the estimated reach in terms of audience numbers. ○ Impressions Delivered: The system shall show the total number of impressions delivered. ○ Average Dwell Time: The system shall display the average time that users engaged with the campaign content. ○ Engagements (Setup to Measure): If measurement is set up, the system shall display the number of engagements; otherwise, it will prompt "SETUP to Measure." 3. Impact Section: ○ Total Engagement Rate: The system shall calculate and display the total engagement rate as a percentage. ○ Total Response Rate (Setup to Measure): The system shall display the total response rate if set up; otherwise, it will prompt "SETUP to Measure." ○ OOH Response Rate (Setup to Measure): Similarly, the system shall display the OOH response rate if set up; otherwise, it will prompt "SETUP to Measure." 4. Audience Analysis: ○ Audience Attributes: The system shall analyze and display the audience's demographics and psychographics, which include: ■ Demographic Attributes: Such as age, gender, and income level.	
--	--	--	--

		■ Psychographic Attributes: Such as interests and behaviors. ○ Geographic Analysis: The system shall provide a geographic breakdown of the audience, detailing their distribution across different areas. 5. In-Store Analytics: ○ Foot Traffic: The system shall show the total number of visitors to the store as a result of the campaign. ○ Conversion Rate: The system shall calculate and display the conversion rate based on in-store purchases or actions. ○ Average Dwell Time: The system shall display the average time that customers spent in the store. ○ Total Transactions: The system shall display the total number of transactions that took place during the campaign period. ○ POS Slips (Setup to Measure): If applicable, the system shall display data related to POS slips; otherwise, it will prompt "SETUP to Measure." ○ Coupon/Voucher Redemption (Setup to Measure): The system shall show redemption rates for coupons or vouchers if measured; otherwise, it will prompt "SETUP to Measure." ○ Activity Counts: The system shall display the number of distinct activities or engagements captured during the campaign.	
--	--	--	--

Use Cases - Campaign and Analytics

Accessing the Campaign and Analytics Screen

- User clicks on the "Reporting and Analytics" button from the navigation bar.

- The system verifies if the user is logged in.
- If the user is logged in, the system redirects the user to the "Campaign and Analytics" screen.
- If the user is not logged in, the system disables the button or prompts the user to log in.

Setting Up Measurement Variables for Specific Reports

- **User accesses the "Campaign and Analytics" screen.**
 - The system displays options to select the ad type to measure.
 - The user selects the desired ad type from the following:
 - Direct Call to Action (SMS, QR Code, Web links)
 - Discounts, Coupons & Vouchers (POS & Print - Redemption Rate)
 - Attribution & Lift on Site/Digital Ads
 - The system displays options to set up tracking and measurement for the selected ad type, including:
 - Website Links
 - QR Code Links
 - Other Call To Action Links (pixels for tracking traffic)
 - The user selects the appropriate options and links digital ad accounts such as Google Ads and Instagram Ads.
 - The system ensures that the user can provide access to analytics tools like Google Analytics or Adobe Analytics.
 - The user sets up UTM parameters for tracking, ensuring QR codes and short URLs are configured correctly.
 - The system validates that all required fields have been completed.

Fetching Analytics from Social Media and Ad Platforms

- **User links social media accounts and digital ad platforms.**
 - The system connects to the linked social media accounts (e.g., Google Ads, Instagram Ads, Facebook Ads Manager).
 - The system fetches analytics data from the linked accounts.
 - The system organizes and displays the fetched analytics data on the "Campaign and Analytics" screen.

Displaying Campaign Analytics Results

- **User views the "Campaign and Analytics" screen after the campaign has concluded.**
 - The system displays the campaign header information, including the title, location, start date, end date, creation date, and campaign type (e.g., Traditional, In-store).
 - The system provides an option for the user to "Download Report" in PDF format.
 - The system displays the following sections:

- **Coverage:**
 - Estimated Reach
 - Impressions Delivered
 - Average Dwell Time
 - Engagements (Setup to Measure)
- **Impact:**
 - Total Engagement Rate
 - Total Response Rate (Setup to Measure)
 - OOH Response Rate (Setup to Measure)
- **Audience Analysis:**
 - Demographic Attributes
 - Psychographic Attributes
 - Geographic Analysis
- **In-Store Analytics (If Applicable):**
 - Foot Traffic
 - Conversion Rate
 - Average Dwell Time
 - Total Transactions
 - POS Slips (Setup to Measure)
 - Coupon/Voucher Redemption (Setup to Measure)
 - Activity Counts
- The system ensures that all analytics data is displayed in a clear and organized manner, providing actionable insights for the user.

Downloading the Campaign Report

- **User clicks on the "Download Report" button.**
 - The system generates a PDF report of the campaign analytics.
 - The system allows the user to download the report to their device.

12- Logged IN VS NON LOGGED IN

Logged-in Users

- **Login and Account Management:**
 - Access login screen and dashboard after successful login.
 - Use email/password or social logins (Facebook, Google, Apple).
 - Reset password via a link sent to the registered email.
 - Redirect to the Sign-Up page from the login page.
 - View and edit personal details in the Profile Management section.
 - Upload or change profile picture.

- Update password with error messages for incorrect entries.
- Manage notification preferences.
- Update billing information.
- Deactivate account with confirmation prompt and optional reason.
- **Sign-Up:**
 - Access the "Sign Up" page.
 - Choose between Advertiser or Media Owner during sign-up.
 - Complete sign-up and be redirected to the dashboard.
- **Dashboard:**
 - Access dashboard functionalities such as searching, applying filters, and viewing listings.
 - Use NAVBAR items: Home, Create a Campaign, Campaign Cart, Saved, OOHUP Logo, Account, Measurement and Analytics.
 - Apply various filters and sorting options to refine search results.
 - View detailed pop-up cards for media units with options to add to campaigns or view details.
 - Save searches and access saved searches.
 - Utilize interactive map features (zoom, pan, data layers, POIs).
- **Campaign Builder:**
 - Access Campaign Builder without mandatory login.
 - Plan different campaign types and fill out campaign forms.
 - Add locations, define target radius, select campaign length, and set budgets.
 - Select target markets and define audience demographics.
 - Choose media categories and reporting/measurement needs.
 - Save campaign settings and selections.
- **Checkout:**
 - View proposal status in the Requests section.
 - Receive notifications for approved requests.
 - Access campaign details and invoicing on the checkout page.
 - Proceed to payment and confirm orders.
 - View order progress and details in the Orders section.
 - Track production management and receive notifications for order updates.
 - Filter and view both completed and ongoing orders.
 - Download detailed order history reports.
 - Contact support from the order detail page.
- **Requests and Orders:**
 - Access Requests feature and view approved requests.
 - Identify request status (approved or needs changes) and view request details.
 - Track progress of orders and view production details.
 - View completed and ongoing orders with history and timestamps.
 - Access vendor profiles from order history.

Non-logged-in Users

- **Login and Account Management:**
 - Navigate to the login screen.
 - Redirect to the login screen from the promotional website.
 - Access the "Forgot Password" page to reset credentials.
- **Sign-Up:**
 - Access the "Sign Up" page.
 - Choose between Advertiser or Media Owner during sign-up.
- **Dashboard:**
 - Access the dashboard and perform functions like searching and applying filters without login.
 - View NAVBAR items.
 - Apply various filters and sorting options.
 - View detailed pop-up cards for media units (price hidden until login).
 - Save searches but only accessible after login.
- **Campaign Builder:**
 - Access Campaign Builder without mandatory login.
 - Plan different campaign types and fill out campaign forms.
 - Add locations, define target radius, select campaign length, and set budgets.
 - Select target markets and define audience demographics.
 - Choose media categories and reporting/measurement needs.
- **Summary page/ Checkout Page:**
 - View campaign summary page with campaign details and map clusters.
 - Edit, add, and delete campaign selections.
 - Download design spec files.
 - Upload design creatives (errors for wrong format).
