

Functional Requirements Document (FRD)

Project Name: Oohup Marketplace

Module: Media Owner Module

1. Introduction

This document outlines the functional requirements for the Media Owner Module in the Oohup Marketplace platform. The purpose of this document is to detail the necessary features, use cases, user stories, and acceptance criteria to guide the development and design of the Platform.

2. Functional Requirements:

1- Login

BRD#	FRD ID	Description	Images/Notes
	1.1	• The system shall ensure that when users click "Log In," they are successfully navigated to the login screen. • The system shall ensure that when the user is logged in, they are redirected to the media owner dashboard successfully.	
	1.2	• The system shall ensure that when the user clicks the "Login" button from the promotional website, they are also successfully redirected to the login screen.	
	1.3	• The system shall ensure that the user is able to log in using their email and password. • The system shall ensure that the user can log in through social platforms such as Facebook, Google, and Apple. • The system shall display an error message if the user enters an incorrect email or password. • The system shall provide a clear error message if there is a problem logging in with social platforms.	The system shall give an error on entering the wrong/email password. The system shall give explanatory error on problems in logging with socials.
	1.4	• The system shall ensure that if the user forgets their password or email, they can retrieve their credentials by clicking on "Forgot Password." • The system shall ensure that on the "Forgot Password" page, the user must enter their registered email address to receive a link for creating a new password.	

	1.5	The system shall ensure that the user can redirect to the Sign-Up page when clicking on "Sign Up" from the Login page.	
--	-----	--	--

Use Cases - Login FRD

1. **User navigates to the login screen by clicking the "Login" button:**
 - User clicks the "Login" button.
 - The system redirects the user to the login screen.
2. **User clicks the "Login" button from the promotional website:**
 - User clicks the "Login" button on the promotional website.
 - The system redirects the user to the login screen.
3. **User logs in using email and password:**
 - User enters email and password.
 - User clicks the "Login" button.
 - The system authenticates the credentials.
 - The system redirects the user to the media owner dashboard.
 - The system displays an error message if the email or password is incorrect.
4. **User logs in using social accounts:**
 - User selects a social login option (Facebook, Google, Apple).
 - The system redirects the user to the selected social platform's authentication page.
 - User logs in using social account credentials.
 - The system authenticates the social login and redirects the user back to the platform.
 - The system displays an explanatory error message if there is a problem with social login.
5. **User forgets password or email:**
 - User clicks the "Forgot Password" link.
 - The system redirects the user to the "Forgot Password" page.
 - User enters email to receive password reset instructions.
 - The system sends a password reset email to the user.
 - User clicks the link in the email and is redirected to a page to reset the password.
6. **User redirects to the Sign-Up page:**
 - User clicks the "Sign Up" button from the Login page.
 - The system redirects the user to the Sign-Up page.

2- Sign Up

BRD#	FRD ID	Description	Images/Notes
	2.1	The system shall ensure that the user is directed to the "Sign Up" or "Get Started" page when clicking on the "Get Started" or "Sign Up" buttons.	
	2.2	• The system shall ensure that when the user clicks "Get Started," they are first presented with a pop-up or screen asking them to confirm whether they are an advertiser or a media owner. • The system shall ensure that upon selecting "Media Owner," the user is directed to the sign-up page. • The system shall ensure that after clicking "Media Owner," the user is given the option to choose between "Traditional Media Owner" or "In-Store/Retail Owner & Businesses." • The system shall ensure that upon selecting either option, the user is presented with the respective forms to fill in the required information.	• A toggle can be provided on the sign-up screen to select between "Media Owner" or "Advertiser."
	2.3	• The system shall ensure that if the user selects "Traditional Media Owner," they will be presented with a form to enter the following details: ○ Name ○ Date of Birth ○ Phone Number ○ Email ○ Company Name ○ Categories (they deal with) • The system shall ensure that if the user selects "In-Store/Retail Media Owner," they will be	• The user shall be prompted that the account has been created successfully. • The created user details shall be stored in the database. • The system shall prompt the user that their account has been created successfully.

		presented with a Business Profile & Venue Details form to enter the following details: User Business Profile form : ○ Name ○ Date of Birth ○ Phone Number ○ Email ○ Position ○ Company Name / Businesses names ○ Location Venue Details Form: 1. Store ID (Auto generated) 2. Shop Name 3. Shop Images Upload 4. Shop Type (Business Segment) Dropdown 5. Shop Type (Sub segment)Dropdown (e.g., Retail, Restaurant, Gym) 6. Shop Description 7. Address 8. Latitude & Longitude (for Marker) 9. Operating Hours 10. Contact Information ○ Phone Number ○ Email Address 11. Store Size (Square Footage) 12. Footfall Data 13. Transaction Data 14. Demographic Data 15. Projected Reach 16. Customers Type (Dropdown. Select Multiple) 17. Add Keywords 18. Peak Hours 19. Shop Images/Photos (upload) 20. Social Media Links 21. Website URL 22. Owner/Manager Information 23. Special Features (e.g., Outdoor Seating, Drive-Thru) 24. Accepted Ad Categories 25. Restricted Ad Categories	● The system shall store the created user details in the database.
--	--	---	--

		26. Content Guidelines 27. Add Keywords Media Unit Management: 1. Same as inventory management for traditional, inventory, campaign manager, calendar • The system shall ensure that once they filled the form and click continue, they will be redirected to the dashboard screen and the account will be created automatically. • The system shall ensure that Venue Detail profile page will be a page on the Instore vendor Portal and will also be present on the dashboard • The system shall ensure that on Venue Detail profile page user can edit, update and save data. • Inventory Items will be managed same as traditional inventory managers.	Keywords Data is very important. (Will be used by search by keyword on map, will be used for audiences, demographics, will be used for customer types)
--	--	---	--

Use Cases - Sign-Up FRD

1. **User navigates to the "Sign Up" or "Get Started" page:**
 - User clicks the "Sign Up" or "Get Started" button.
 - The system redirects the user to the "Sign Up" or "Get Started" page.
2. **User selects user type during sign-up:**
 - User clicks "Get Started."
 - The system presents a pop-up or screen to confirm if the user is an advertiser or a media owner.
 - User selects "Media Owner."
 - The system redirects the user to the media owner sign-up page.
 - User chooses between "Traditional Media Owner" or "In-Store/Retail Media Owner."
 - The system presents the respective form for the user to fill in the required information.
3. **User signs up as a "Traditional Media Owner":**

- User selects "Traditional Media Owner."
 - The system presents a form for the user to enter details (Name, Date of Birth, Phone Number, Email, Company Name, Categories).
 - User fills in the form and clicks "Continue."
 - The system creates the account and redirects the user to the dashboard.
 - The system stores the created user details in the database.
 - The system displays a success message confirming account creation.
4. **User signs up as an "In-Store/Retail Media Owner":**
- User selects "In-Store/Retail Media Owner."
 - The system presents a form for the user to enter details (Name, Date of Birth, Phone Number, Email, Company Name, Categories).
 - User fills in the form and clicks "Continue."
 - The system creates the account and redirects the user to the dashboard.
 - The system stores the created user details in the database.
 - The system displays a success message confirming account creation.

3- Main Dashboard

BRD#	FRD ID	Description	Images/Notes
	3.1	The system shall ensure that when a user logs in or signs up, they will be directed to the main dashboard page. The system shall ensure that user will be able too see following menu items in the dashboard: 1- Inventory 2- Calendar View 3- Campaign Manager 4- Requests 5-Settings 6- Business Profile Page (user page) (All Media Owners) 7- Venue Details Page (Instore owners only)	

	3.2	The system shall ensure that when the user is on the main dashboard page, they will be able to see the following elements: • Navigation bar items • Profile icon	
	3.3	The system shall ensure that on the dashboard, the user will be able to see key metrics and KPI indicators with counts, including: • Total Orders • New Orders • Requests, which will show the count of new requests • Orders Under Production • Live Orders or their locations on a map, if possible • Total Inventory • Total Earnings	
	3.4	The system shall ensure that when the user clicks on any specific KPI metric listed above, they will be navigated to the corresponding page.	
	3.5	The system shall also ensure that there will be graphs associated with these indicators, so the user can have a quick overview of past months or years as well. The system shall ensure that users will have complete quick overview of all their activities being done as media owner.	

	3.6	• The system shall ensure that the user will be able to sign up as either a traditional or in-store media owner. • The system shall ensure that the user is able to fill out the form correctly and then be redirected to the dashboard based on whether they have chosen traditional or in-store. • The system shall ensure that when a traditional media owner is on the dashboard, they will only see traditional-related items, while an in-store media owner will see in-store-related items. • The system shall ensure that, depending on whether the user is on the in-store or traditional dashboard, only some fields will be disabled accordingly.	
--	-----	---	--

Use Cases - Main Dashboard FRD

- 1. User is directed to the main dashboard after logging in or signing up:**
 - User logs in or signs up.
 - The system redirects the user to the main dashboard page.
- 2. User views dashboard menu items:**
 - User is on the main dashboard page.
 - The system displays the following menu items: Inventory, Calendar View, Campaign Manager, Requests, Settings.
- 3. User views dashboard elements:**
 - User is on the main dashboard page.
 - The system displays the navigation bar items and the profile icon.
- 4. User views key metrics and KPI indicators:**
 - User is on the main dashboard page.
 - The system displays key metrics and KPI indicators with counts, including Total Orders, New Orders, Requests, Orders Under Production, Live Orders (locations on a map), Total Inventory, Total Earnings.
- 5. User navigates to detailed metrics pages:**
 - User clicks on any specific KPI metric.

- The system navigates the user to the corresponding page.
- 6. **User views graphical overview of past performance:**
 - User is on the main dashboard page.
 - The system displays graphs associated with key metrics and KPI indicators for a quick overview of past months or years.

4- Inventory

BRD#	FRD ID	Description	Images/Notes
Inventory Dashboard	4.1	● The system shall ensure that when the user clicks on Inventory from the dashboard, they will be taken to the Inventory dashboard screen. ● The system shall ensure that the user can see the list of uploaded inventory in a table format. ● The system shall ensure that for “Instore Media owner”, all uploaded inventory is linked to a Venue, Venue is created using the venue details form during login and displayed in the venue details page ● The system shall ensure that if there is no uploaded entry, the user will be shown an "Upload Inventory" button. ● The system shall ensure that the dashboard displays the list of all uploaded inventory. ● The system shall ensure that filters are available on the table, which users can apply to see the results accordingly. ○ The system shall allow media owners to filter and sort inventory items based on various criteria like media type, location, and availability. ● The system shall allow users to filter/sort and show/hide columns in the table.	● The system shall ensure comprehensive error handling for all inventory management actions, providing clear and actionable feedback to the media owner.

		• The system shall provide an option for users to upload inventory data in bulk via a designated "Upload Inventory" button above the table grid. ○ A simple upload option should also be available for users to add individual inventory items. • The system shall provide a dashboard for media owners to view and manage their inventory. • The system shall allow the import and export of inventory data. • The system shall display a list of all inventory items with details. • The system shall ensure media owners can perform bulk actions such as activating/deactivating multiple inventory items or deleting them.	
	4.2	• The system shall ensure that the user will be able to see the following items in the table: • Inventory Section: ○ Media ID ○ Media Type ○ Location Description ○ Location Type ○ GPS Coordinates ○ City/Town ○ State/Province ○ GEOTAG • Media Type Section: ○ Media ID ○ Media Type ○ Panel Size (HxW) ○ Orientation ○ Visibility ○ Illumination Type ○ Digital Display Type • Location Section:	

		○ Media ID ○ Location Description ○ Location Type ○ GPS Coordinates ○ City/Town ○ State/Province ● Display Section: ○ Media ID ○ Display Rotation ○ Traffic Count ○ Impression Rate ○ Audience Demographics ○ Availability Section: ○ Media ID ○ Inventory ID ○ Availability Start Date ○ Availability End Date ● Pricing Section: ○ Media ID ○ Inventory ID ○ Rate Card Price ○ Advertising Formats ● The system shall ensure that the media owner will be able to edit/delete inventory. ● The system shall ensure that when the media owner clicks on edit, they will be navigated to the edit screen. ● The system shall ensure that if the user wants to delete the inventory by clicking on the delete icon, they will be prompted with a confirmation dialog asking if they are sure they want to delete. ● The system shall allow the user to sort and filter the data within the table grid based on the column headers. ● The system shall allow the user to click on a row to view more detailed information or to take specific actions related to that inventory item. ● The system shall ensure that users have the ability to apply filters to the table grid to view specific data based on selected criteria.	
--	--	---	--

		• The system shall provide sorting functionality on all columns to allow users to order the data as needed. • The system shall include a feature that allows users to show or hide specific columns within the table grid, tailoring the view to their needs. • The system shall provide search functionality above the table grid, enabling users to quickly find specific inventory items based on keywords or identifiers.	
Upload Inventory And Bulk	4.3	• The system shall ensure that if the user clicks on "Upload Inventory" from the menu or clicks the "Upload Inventory" button from the inventory dashboard, they will be navigated to the "Upload Inventory" screen. • The system shall ensure that on the "Upload Inventory" screen, the user will be able to see the following elements: • Media Inventory Bulk Import section with options to: • Download the Media Inventory Template (.xls) • Download the Inventory Guide • Upload Inventory section, including: • Instructional text guiding the user on how to upload inventory files • A file upload area that allows the user to select a file or drag and drop a file into the designated area • A button to Select File for upload, with support for JPG, PNG, or PDF files, each file not exceeding 10MB in size. • The system shall ensure that the system will not allow the user to upload a file if criteria are not met.	

		• The system shall ensure that the system will not allow the user to upload if the file is not in the required format. • The system shall ensure media owners can upload inventory in bulk using the provided inventory XLS template. • The system shall ensure media owners can download the provided Inventory Template. • The system shall validate the uploaded XLS file for the correct format and required fields before processing. • The system shall provide error messages for any discrepancies found in the uploaded file, indicating the specific errors and their locations in the template. • The system shall ensure successful uploads are added to the inventory database and provide a confirmation message. • The system shall ensure the inventory is updated in the Scheduling Calendar and also on the platform accordingly. • The system shall allow the export of inventory data in XLS format.	
Upload invenotry single entry	4.4	• The system shall allow media owners to add new inventory items individually through a detailed entry form. • The system shall ensure the form includes fields as per the template for inventory (inventory unit info, measurement info, creative info). ◦ The system shall ensure that user will be able to see the multiple forms to fill in the inventory data. ◦ These fields will be provided by Umair Later on. • The system shall validate each field for correct data entry and provide real-time feedback for errors or missing information. • The system shall ensure successful uploads are added to the inventory database and provide a confirmation message.	• The system shall provide a button to initiate the export process and display a progress indicator during the generation of the XLS file.

		• The system shall provide a dedicated Import/Export module page within the Media Owner Dashboard. • The system shall include an upload button for media owners to select and upload the XLS file. • The system shall display instructions and guidelines for preparing the XLS file according to the provided template. • The system shall show a progress indicator during the import process and a summary of the results.	
Editing Invenotry	4.5	• The system shall ensure that when the user clicks on the edit inventory screen, they will be able to see the edit inventory screen where they can edit fields and update data. • The system shall ensure media owners can edit existing inventory items. • The system shall provide an interface for searching and selecting specific inventory items for editing. • The system shall display the current details of the selected inventory item and allow modifications to fields such as location, dimensions, availability, and pricing. • The system shall validate the updated information before saving changes and provide feedback on any errors. • The system shall ensure that edited inventory items are updated in the database and reflect the changes immediately.	• The system shall allow the export of inventory data in XLS format.
Inventory Status and Availabilit y		• The system shall track and display the status (active/inactive) of each inventory item. • The system shall ensure media owners can update the availability of inventory items	• (marking items as booked, in production, or available).

		(marking items as booked, in production, or available). • The system shall automatically update the availability status of inventory items based on bookings made by advertisers. • The system shall ensure media owners can manually assign campaigns to inventory items, and the inventory item's schedule (availability) will update across all platforms (e.g., calendar and inventory). • The system shall ensure that the user will be able to change the status even from the inventory dashboard.	Different status indicators
Create Campaign Manually	4.6	• The system shall ensure that the user is able to create campaigns manually. • The system shall ensure that when the user clicks on "Create Campaign" from the inventory, campaign builder, or calendar view, they are presented with manual entry forms. • The system shall ensure that the user is able to see all the related fields that the advertiser fills out while creating the campaign. • The system shall ensure that the media owner is able to create campaigns for users outside platform. • The system shall ensure that proper fields, such as personal details, company details, campaign details, and pricing, are available in the form. • The system shall ensure that once the user has filled out the campaign creation form, it is updated in the calendar view as well as in the campaign manager.	

--	--	--	--

Use Cases - Inventory FRD

1. **User navigates to the Inventory dashboard:**
 - User clicks on Inventory from the dashboard.
 - The system navigates the user to the Inventory dashboard screen.
2. **User views uploaded inventory in a table format:**
 - User is on the Inventory dashboard screen.
 - The system displays the list of uploaded inventory in a table format.
3. **User uploads inventory if no entries exist:**
 - User is on the Inventory dashboard screen.
 - The system displays an "Upload Inventory" button if no uploaded entry exists.
4. **User applies filters and sorts inventory items:**
 - User applies filters to the table to see the results accordingly.
 - The system filters and sorts inventory items based on the selected criteria.
5. **User uploads inventory data in bulk:**
 - User clicks the "Upload Inventory" button.
 - The system navigates the user to the "Upload Inventory" screen.
 - User selects and uploads a file using the provided upload area.
 - The system validates the uploaded file format and fields before processing.
 - The system provides confirmation or error messages based on the upload status.
6. **User adds new inventory items individually:**
 - User clicks on the "Upload Inventory" menu option.
 - The system navigates the user to a detailed entry form for adding individual inventory items.
 - User fills in the inventory data fields.
 - The system validates each field and provides real-time feedback.
 - The system adds successful uploads to the inventory database and provides a confirmation message.
7. **User edits or deletes existing inventory:**
 - User clicks on an inventory item to edit or delete.
 - The system navigates the user to the edit inventory screen.
 - User modifies the necessary fields and saves changes.
 - The system updates the database and reflects the changes immediately.
 - User clicks delete, and the system prompts a confirmation dialog before proceeding.
8. **User tracks and updates inventory status and availability:**
 - User views the status (active/inactive) of each inventory item.

- User updates the availability status of inventory items (booked, in production, or available).
 - The system automatically updates the availability status based on bookings.
 - The system reflects changes in status across all relevant platforms.
9. **User creates a campaign manually:**
- User clicks on "Create Campaign" from the inventory dashboard.
 - The system presents a manual entry form for campaign creation.
 - User fills in the campaign details.
 - The system updates the calendar view and campaign manager with the new campaign.

Business Profile & Venue Details Page (Instore login)

BRD#	FRD ID	Description	Images/Notes
		● The system shall ensure that Business profile page will be a page on the Portal (all Login users) ● The system shall ensure that Venue Detail profile page will be a page on the Portal (specifically for Instore Owner logins) and will also be present on the dashboard ● The system shall ensure that on Venue Detail profile page user can edit, update and save data. ● Inventory Items will be managed same as traditional using inventory manager. ● Each Instore Inventory Item will be linked to the Venue ● The system shall ensure all details collected from the Venue Details form & Business Profile Form (during signup) are present on this page ● The system shall ensure that on Venue Detail page & Business Profile Page user can edit, update and save data.	

5- Campaign Manager

BRD#	FRD ID	Description	Images/Notes
	5.1	• The system shall ensure that when the user clicks on the campaign manager, they are redirected to the campaign manager dashboard main screen. • The system shall ensure that on this screen, users are able to see the list of all internal and external campaigns booked against that media owner.	
	5.2	The system shall ensure that users are able to see the following information related to campaigns in a table format: • Action: Edit/Delete and change the status accordingly • Campaign ID: Campaign Name + ID • Units: Media ID • Advertiser: POC, Company, Contact, Email • Payments: Amount, Checkout • Location: City/Town • Campaign Schedule: Campaign Start Date, Campaign End Date, Creation Date, Revision Date, Status The system shall ensure that users can change the status of campaigns to ongoing, finished, pending, or under approval.	
	5.3	• The system shall ensure that filters and search options are available, allowing users to search for specific campaigns. • The system shall ensure that users are able to import campaign files by uploading an XLS file.	

		• The system shall ensure that imported campaigns fetch data accurately and correctly. • The system shall ensure that users can sort and filter campaigns, with filters available by advertiser, date range, etc.	
	5.4	• The system shall ensure that media owners can assign campaigns manually from the campaign builder. • The system shall ensure that the user is able to see all the related fields that the advertiser fills out while creating the campaign. • The system shall ensure that the media owner is able to create campaigns for users outside Platform. • The system shall ensure that proper fields, such as personal details, company details, campaign details, and pricing, are available in the form. • The system shall ensure that once the user has filled out the campaign creation form, it is updated in the calendar view as well as in the campaign manager. • The system shall provide a user-friendly interface for creating, modifying, and managing both internal and external bookings. • The system shall alert media owners if there are any conflicts or overlaps in the booking and scheduling of inventory items. • The system shall allow media owners to view and manage all details related to these bookings, including inventory items, booking period, advertiser details, and creative files uploaded.	
	5.5	• The system shall allow media owners to accept or decline bookings (only if not available on advertiser's dates). Alternative	

		dates will be suggested to the advertiser to accept.	
	5.6	• The system shall allow media owners to request creative file revisions. • New booking requests will also be populated in the campaign manager module. • The system shall allow media owners to cancel existing bookings and update the availability status of the corresponding inventory items. • The system shall notify advertisers of the booking cancellation and provide options for rescheduling.	
	5.7	• The system shall ensure that when the user clicks on any campaign from the list, they are redirected to that campaign's detail page where they can see all the details related to that campaign. • The system shall ensure that the user is also able to change the status from the campaign detail page.	

Use Cases - Campaign Manager FRD

- User navigates to the campaign manager dashboard:**
 - User clicks on the campaign manager.
 - The system redirects the user to the campaign manager dashboard main screen.
- User views campaign details in a table format:**
 - User views the list of all internal and external campaigns.
 - The system displays details such as Campaign ID, Media ID, Advertiser, Payments, Location, Schedule, and Status in a table format.
- User filters and searches campaigns:**
 - User applies filters or searches for specific campaigns.
 - The system filters and displays campaigns based on the selected criteria.
- User assigns campaigns manually:**
 - User assigns campaigns using the campaign builder.

- The system updates the calendar view and campaign manager with the assigned campaign.
- 5. **User accepts or declines bookings:**
 - User views and assesses booking requests.
 - User accepts or declines bookings.
 - The system updates the availability status of the corresponding inventory items and notifies advertisers.
- 6. **User requests creative file revisions:**
 - User requests revisions for creative files.
 - The system tracks and updates the status of the request.
 - The system notifies advertisers of the requested revisions.
- 7. **User views campaign details:**
 - User clicks on a campaign from the list.
 - The system redirects the user to the campaign's detail page where they can view and update the campaign status.

6- Scheduling/ Calendar View

BRD#	FRD ID	Description	Images/Notes
	6.1	● The system shall ensure that when the user clicks on the schedule/calendar view, they are redirected to the calendar view screen. ● The system shall ensure that the calendar view is an exact mapping of the campaign manager, but in a calendar format.	
	6.2	● The system shall ensure that users are able to see all campaigns effectively and efficiently in the calendar view, with campaigns displayed according to their status and dates. ● The system shall ensure that users are able to see the production status of campaigns in	

		both the campaign detail page and the calendar view. • The system shall ensure that users can apply location filters and see the corresponding units displayed for the selected location on the left side of the calendar. • The system shall ensure that when the user applies a location filter to see units, they are able to see the following details in cards: ○ Billboard type icon ○ Billboard details ○ Buttons for viewing details	
	6.3	• The system shall provide a calendar interface where media owners can view, create, modify, and delete bookings and scheduled campaigns, supporting different views (daily, weekly, monthly) and displaying color-coded entries to distinguish between internal and external bookings.	
	6.4	• The system shall provide a search bar and filters by Media ID, media type, campaign status (active, ended, in production), and booking source (internal, external) to help media owners find specific bookings or campaigns.	
	6.5	• The system shall allow media owners to click on a calendar entry to view detailed information about the booking or campaign, including inventory items, advertiser details, booking period, and campaign creatives.	
	6.6	• The system shall ensure that creating, editing, updating, and importing external campaigns is done only in the campaign manager, with the calendar updating and displaying the information accordingly.	The system shall alert media owners if there are any conflicts or overlaps in the booking and scheduling of inventory items.

Use Cases - Scheduling/Calendar View FRD

1. **User navigates to the calendar view:**
 - User clicks on the schedule/calendar view.
 - The system redirects the user to the calendar view screen.
2. **User views campaigns in calendar format:**
 - User is on the calendar view screen.
 - The system displays campaigns according to their status and dates.
3. **User filters calendar by location and media type:**
 - User applies location and media type filters.
 - The system displays corresponding units and their details in the calendar view.
4. **User creates, modifies, or deletes bookings in the calendar view:**
 - User interacts with the calendar interface.
 - The system supports daily, weekly, monthly views with color-coded entries.
5. **User views booking and campaign details from the calendar:**
 - User clicks on a calendar entry.
 - The system displays detailed information about the booking or campaign.
6. **System updates calendar based on campaign manager changes:**
 - User creates, edits, or updates campaigns in the campaign manager.
 - The system updates the calendar view accordingly.

7- Production

BRD#	FRD ID	Description	Images/Notes
	7.1	● The system shall ensure that the Production Management module helps media owners manage the production process for advertising campaigns, including the creation, approval, distribution, and installation of creatives at ad spots.	

	7.2	The system shall ensure that this module guarantees all creative assets and production steps meet the required specifications and deadlines.	
	7.3	- The system shall ensure that users are able to see the production details on the campaign detail page, including a progress tracker that reflects the current status of the campaign. This progress tracker should be accurate and visible to both the user and the advertiser. - The system shall ensure that users are able to see production-related details accurately, including who is managing the production and the current status in the progress tracker. - The system shall track the deployment/installation status, providing real-time updates on which campaigns are live and their specific locations. - The system shall send notifications when creatives are successfully deployed/installed at the ad spot location or if there are any issues during deployment.	User shall receive alerts through emails and through platform.

Use Cases - Production FRD

- User manages the production process:**
 - User navigates to the Production Management module.
 - The system allows the user to manage production for advertising campaigns, including creation, approval, distribution, and installation of creatives.
- User ensures production specifications and deadlines are met:**
 - User monitors production steps.
 - The system guarantees all creative assets meet required specifications and deadlines.

3. User tracks production progress:

- User views production details on the campaign detail page.
- The system displays a progress tracker reflecting the current status of the campaign.
- The system provides real-time updates on the deployment/installation status of campaigns.

4. System sends production alerts:

- The system sends notifications to users when creatives are successfully deployed/installed or if there are issues.

8- Requests and Approvals

BRD#	FRD ID	Description	Images/Notes
	8.1	• The system shall ensure that when a user clicks on the Requests module from the navigation or main dashboard, they are able to see the Requests and Approvals screens. • The system shall ensure that users are able to see requests in the form of a list table with all the details related to campaigns, including complete order details in a table format as shown in the attached image. • The system shall ensure that users are able to accept or decline requests.	
	8.2	• The system shall ensure that when a user accepts a request after reviewing the details, the request is marked as accepted and sent to the advertiser, who can then proceed with payment and the order.	

		The system shall ensure that if a user rejects a request, they must provide detailed reasoning. A form shall be available where the user can add a reason for cancellation, request revisions for creatives, or inform the advertiser about the unavailability of the unit.	
	8.3	- The system shall provide a list view of all incoming campaign requests. The list shall include key details for each request, such as the advertiser name, requested media items, campaign start and end dates, status (pending, approved, declined), and creative files. - The system shall allow media owners to view and assess the creative files attached to the campaign request to ensure they meet the required specifications.	
	8.4	- The system shall allow media owners to click on a campaign request to view detailed information, including the full campaign brief, creative specifications, and any special requirements. - The system shall allow media owners to view and assess the creative files attached to the campaign request to ensure they meet the required specifications.	
	8.5	- The system shall provide an option to approve a campaign request. - Upon approval, the system shall automatically update the Campaign Manager and Calendar modules with the approved campaign details. - The system shall send a notification to the advertiser informing them of the approval.	
	8.6	The system shall provide an option for media owners to request revisions to a campaign	

		proposal before making a final decision (for example, suggesting alternative campaign dates). • The system shall allow media owners to specify the required changes and send the request back to the advertiser for revision. • The system shall track the status of revised requests and update the list view accordingly.	
	8.7	• The system shall ensure that any changes made to campaign requests in the New Campaign Requests module shall be reflected in the Campaign Manager module and Calendar.	
	8.8	• The system shall send notifications to media owners when new campaign requests are received. • The system shall send notifications to advertisers when the status of their campaign request changes (approved, declined, or revision requested).	
	8.9	• The system shall allow media owners to approve or request revisions for each creative file attached to a campaign request. • The system shall provide an option to add comments or feedback on the creative files, specifying the reasons for requesting revisions and any required changes.	
	8.10	• The system shall ensure that when an advertiser sends a proposal to the media owner, the media owner can view it and make adjustments related to dates or unit availability in the feedback form. • The system shall ensure that if the selected dates or units are not available, the media	Will be cater in the design and dev side need to figure out with shahzad.ali@jbs.live

		owner will be able to send feedback with alternative dates. • The system shall ensure that when the media owner sends alternative dates to the advertiser, the proposal will be updated and correctly sent back to the advertiser. • The system shall ensure that the updated proposal is sent back to the advertiser with the changes made by the media owner. • The system shall ensure that the new proposal contains the updated dates proposed by the media owner. • The system shall ensure that advertiser can take action, if proposed dates /changes are approved by the advertiser, they can directly make payment by checking out.
